Child Support Enforcement Reports

July 1, 2009 through December 31, 2009

Federal Child Support requirements require Child Support Enforcement Agency (CSEA) program performance to be reported in the performance measures of:

Establishment of Paternity

Establishment of Support Orders

Collection of Current Support

Collection of Past Due Support

The data is reported on the State OCSE 157/ODJFS4223 Report (QFR094RA). The report is generated quarterly, with a final Federal Fiscal Year (FFY) report submitted to the federal office. Performance line item data is measured either as it occurred during the reporting period or as a point in time measure. The data contained in this report is broken into six month calendar year periods, and is representative of the applicable point in time of the federal reporting period. The January – June report reflects months four through nine of the federal reporting period. The July – December report reflects the last three and first three months of two separate FFY reporting periods.

Performance Measurements

The attached performance measure summary details Ohio’s state-wide percentages for the period of July, 2009 through December, 2009.

- ? Establishment of Paternity – Ohio’s performance measure uses the state-wide paternity establishment percentage (PEP), calculated by of the number of children having paternity established for the current year, divided by the number of children born out-of-wedlock (BOW) during the previous year. County performance uses the IV-D paternity establishment percentage (IV-D PEP), calculated by dividing the total number of children born out of wedlock with paternity established or acknowledged in the CSEA IV-D caseload during the performance year by the total number of IV-D children born out of wedlock as of the end of the preceding performance year. The IV-D PEP measurement is reflected in this report.
- ? Establishment of Support Orders – This performance measure is calculated by dividing the number of IV-D cases with support orders established by the total number of IV-D cases.
- ? Collection of Current Support – This performance measure is calculated by dividing the amount of current support collected in IV-D cases by the total amount of current support owed in IV-D cases with orders.
- ? Collection of Past Due Support – This performance measure is calculated by dividing the number of IV-D cases with an arrearage collection by the total number of IV-D cases with an arrearage owed.
