

Practice Profile #5

Implementing

Identifying and applying the most effective and culturally appropriate services, resources, and processes to meet the goals established in the planning stage.

Implementation is a process...

- Facilitate service referrals and linkages for the family
- Use releases of information to engage in communication with service providers
- Ensure that case transfers are the least disruptive possible to the family
- Review safety plans and case plans with families at each contact to ensure they are being implemented and followed
- Progressively move the case toward least-restrictive involvement
