Case Work Expert Survey #1
Thank you for agreeing to assist the Ohio Department of Job and Family Services (ODJFS) in identifying the variety of child welfare services that are needed for children and families coming to the attention of public child welfare agencies.

This survey requires you to read short summaries, or vignettes, of 9-10 cases. These vignettes represent a random subset of 39 vignettes that experts around the country are evaluating as part of this study. The vignettes represent real cases in Ohio, and vary in complexity and amenability to interventions. The arbitrary case numbers you’ll see may not be consecutive.

Associated with each vignette are anywhere from 1 to 18 concerns. These concerns were identified by child welfare caseworkers when they assessed the families. You will find these concerns to have generally straightforward connections to the details presented in the vignette.

**The following are instructions you are requested to follow:**

- You will be asked to provide your opinion about the need to address each concern and make recommendations for services. These vignettes should be read as if the case is at the point where services are being planned. It will sometimes be challenging, based on the information provided, to know what to recommend.

- In making your recommendations, please assume that each case is being managed by a competent, well-supervised worker who meets professional standards in terms of his or her ability to engage and assess families, plan and coordinate services, evaluate progress, and deal with diversity issues. You should assume the caseworker is a service coordinator, though, and not a service provider.

- Not every concern identified requires a service referral (that is, a “response”). You will have the option of stating, based on the information provided, that no service referral is needed at the present time.

- Before evaluating the cases, you will be asked a few questions about your professional qualifications.

- Often you will be asked to recommend specific interventions. These are interventions that ODJFS has identified as potentially relevant to some children's services cases. It would be highly unusual if you were familiar with all of these interventions, or perhaps even most of them. Please do not be concerned about interventions with which you are unfamiliar; simply focus on selecting interventions from among those with which you are familiar.

**We acknowledge that some of the judgments you are being asked to make are challenging. If you believe that a judgment is simply not possible given the available information, you may choose to leave that question blank.**

The results of this study will be used to improve children’s services in Ohio. ODJFS will see only aggregate responses across all of the experts being surveyed. Your responses will be kept strictly confidential.

Given that only professional judgments are being solicited, that the goal of the research is system improvement, and that your responses will not be attributable to you, this research has not been submitted to an Institutional Review Board for review.

We are grateful for your time completing this survey as it will help to improve services. Thank you.

Your Qualifications

1. Name and address (This information is so we can process your honorarium.)

2. Primary Current Employment
   Employer
   Years at Employer
   Current Title

3. Other Current Employment (if any).
   Employer
   Years at Employer
   Current Title

4. Please indicate the percentage of time currently spent with the following job responsibilities. Answers must add up to 100
   Casework
   Casework Supervision
   Administration of Children Services
   Teaching
   Research
   Advocacy
   Consulting
   Training
5. Please indicate the percentage of time spent on following job responsibilities, on average, over the past ten years. Answers must add up to 100.

- Casework
- Casework Supervision
- Administration of Children Services
- Teaching
- Research
- Advocacy
- Consulting
- Training
The family consists of the mother and father (Alicia age 42 and Kevin age 43) and their 14 year old son, Ethan.

The father called the agency asking for assistance. He was just released from jail after completing his two week sentence for domestic violence. He stated while he was in jail, his wife (Alicia), and Ethan were drinking and smoking marijuana. Kevin stated that Alicia is divorced him, and he is not living with them.

Alicia, the mother to Ethan, does not report cognitive delays, physical or emotional problems. She reports that she was divorcing Kevin because of domestic abuse. She stated that 15 years ago her then boyfriend would hit her when he was intoxicated, and she has no tolerance for such abusive individuals. Leaving Kevin, she stated, is a huge positive. She stated that he constantly brought the family down and failed to contribute to the family's well-being. She stated she does not drink alcohol, but smokes marijuana. She stated she does not smoke marijuana around Ethan.

Alicia and Ethan were observed to interact very well with one another. They talked to one another, appeared to be comfortable in each other's presence, and made ample amount of eye contact.

Alicia and Ethan have safe and stable housing, as Alicia works full-time. A major support system is Alicia's parents.

**Concern: Domestic Violence (Adult)**

6. Which of the following statements best represents your view regarding this concern?

- This concern doesnotrequirearesponse at this time. **SKIP TO NEXT CONCERN.**

- This concern mayrequirearesponseinthefuture; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**

- This concern is important but wouldbeaddressedifthecaseworkersuccessfullymanagedalloftheotherconcerns identified in this case. **SKIP TO NEXT CONCERN.**

- This concern is of secondaryimportance and may be addressed at the caseworker's discretion.

- This concern requiresaresponse that would have to be successfully implemented before the case could be closed.
7. Following are several evidence-based interventions that can be appropriate for some people who experience domestic violence. Select all interventions you would recommend for this case.

- Community Advocacy Project
- Family Thriving Program
- Prevention and Relationship Enhancement Program
- Prolonged Exposure Therapy for PTSD for Adults
- Seeking Safety for Adults
- Healthy Families America
- Narrative Exposure Therapy
- Other Interventions

8. How likely would the family be to fully cooperate in obtaining services to address this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely

9. How likely would there be a substantial benefit from services intended to address this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely

**Concern: Substance Abuse (Adult)**

10. Which of the following statements best represents your view regarding this concern?

- This concern does not require response at this time. **SKIP TO NEXT CONCERN.**
- This concern may require response in the future; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**
- This concern is important but would be addressed if the caseworker successfully managed all of the other concerns identified in this case. **SKIP TO NEXT CONCERN.**
- This concern is of secondary importance and may be addressed at the caseworker’s discretion.
- This concern requires response that would have to be successfully implemented before the case could be closed.
11. How strongly do you agree or disagree that this case should be referred for assessment and intervention planning by an organization qualified to address this concern?

- Agree strongly
- Agree
- Disagree
- Disagree strongly

12. How likely would there be full cooperation by the relevant family member(s) in addressing this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely

13. How likely would there be a substantial benefit from services intended to address this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely

**Concern: Self-Protection (Child Vulnerability)**

14. Which of the following statements best represents your view regarding this concern?

- This concern doesnotrequirearesponse at this time. **SKIP TO BOTTOM OF PAGE AND HIT NEXT.**

- This concern mayrequirearesponseinthefuture; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO BOTTOM OF PAGE AND HIT NEXT.**

- This concern is important but wouldbeaddressedifthecaseworkersuccessfullymanagedalloftheotherconcerns identified in this case. **SKIP TO BOTTOM OF PAGE AND HIT NEXT.**

- This concern is of secondaryimportance and may be addressed at the caseworker's discretion.

- This concern requiresaresponse that would have to be successfully implemented before the case could be closed.

15. Please describe what type of referral you would make to address this concern.
16. How likely would there be full cooperation by the family in addressing this concern?

Case 2

The family composition consists of a 38 year old mother (Emma), a 32 year old father (Mason) and three children: 9 year old daughter (Sophia), 7-year old daughter (Isabella), and their 6-year old son (Michael).

The family’s involvement with the agency began when it was reported the 7 year old child (Isabella) had been sexually assaulted by her 16 year old cousin while she was spending the night in a family member’s home. A family member contacted the child’s mother to report the incident. Isabella was taken by her mother to obtain a physical exam where it was indicated there was a laceration in the perianal region. She attends Kindergarten and is doing well academically and gets along with her peers. Her well care and shots are up-to-date.

The 6 year old (Michael) attends preschool and has an IEP to address behavioral concerns. The mother indicated he struggles with his behavior in the home and at school. He has sensory issues and reactive temperament.

The 9-year old (Sophia) is in the 2nd grade where she has no academic problems and gets along with her peers. There is no reported emotional behavioral concerns. Vaccinations are up-to-date.

The mother graduated from high school and attended some college. She does not have any reported physical or medical concerns and no issues of domestic violence or substance abuse are noted. She is the primary disciplinarian and uses praise, redirection, time-outs and limited spanking. The father dropped out of high school in the 9th grade. He denies having academic difficulties or any medical or physical conditions. He indicated that he rarely drinks, and when he does not continue to intoxication. The mother does not drink. He allows his wife to discipline their children. Both parents appeared very nurturing. Both parents work and have a support system. The father had a traumatic childhood of abuse and neglect and alcoholic mother. The sexual abuse of his daughter seems to be triggering anxiety related to his past traumas. Review of agency records indicated the father has an indicated report of sexual abuse against his stepdaughter, who is living with his ex-wife, and was sexually abused by his older sister.

**Concern: Sexual Abuse (Child)**

18. Which of the following statements best represents your view regarding this concern?

- This concern does not require a response at this time. **SKIP TO NEXT CONCERN.**

- This concern may require a response in the future; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**

- This concern is important but would be addressed if the caseworker successfully managed all of the other concerns identified in this case. **SKIP TO NEXT CONCERN.**

- This concern is of secondary importance and may be addressed at the caseworker’s discretion.

- This concern requires a response that would have to be successfully implemented before the case could be closed.
19. Following are several evidence-based interventions that can be appropriate for some people who experience sexual abuse as a child. Select all interventions you would recommend for this case.

- Trauma-Focused Cognitive Behavioral Therapy
- Multisystemic Therapy for Child Abuse and Neglect
- Children with Problematic Sexual Behavior - Cognitive Behavior Therapy
- Trauma Systems Therapy
- Trauma Affect Regulation
- Prolonged Exposure Therapy for Adolescents
- Cognitive Processing Therapy
- Other Interventions

20. How likely would there be full cooperation by the family in addressing this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely

21. How likely would there be a substantial benefit from services intended to address this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely

**Concern: Self-Protection (Child Vulnerability)**

22. Which of the following statements best represents your view regarding this concern?

- This concern **does not require a response** at this time. **SKIP TO NEXT CONCERN.**
- This concern **may require a response in the future**; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**
- This concern is important but **would be addressed if the caseworker successfully managed all of the other concerns** identified in this case. **SKIP TO NEXT CONCERN.**
- This concern is of **secondary importance** and may be addressed at the caseworker’s discretion.
- This concern **requires a response** that would have to be successfully implemented before the case could be closed.
23. Please describe what type of referral you would make to address this concern.

24. How likely would there be full cooperation by the family in addressing this concern?
   - Very likely

- Disagree
- Disagree strongly
32. How likely would there be full cooperation by the family in addressing this concern?

- [ ] Very likely
- [ ] Somewhat likely
- [ ] Somewhat unlikely
- [ ] Very unlikely

33. How likely would there be a substantial benefit from services intended to address this concern?

- [ ] Very likely
- [ ] Somewhat likely
- [ ] Somewhat unlikely
- [ ] Very unlikely
The family composition consists of a 30-year-old single mother (Sarah) and her two children: 13-year-old son (Lucas) and 8-year-old son (David).

The Agency became involved with the family when a neighbor reported the mother was selling her food stamps to support her drug habit. The neighbor said the mother uses crack and heroin, and her sons are going around the apartment complex telling their neighbors that their mother has cancer. The sons beg neighbors for food and money. Both children have stolen items from the neighbors. Additionally, the children are sometimes locked out of their home for hours.

The mother became pregnant while in high school, and did not finish. She does not use physical discipline with her sons, and does not pay a lot attention to them while she is engaging in substance abuse. She is in remission from ovarian cancer and her family helped her out with the boys while she was in treatment. The mother denied using any drugs; however her drug screen came back positive for her prescriptions (opiates-hydrocodone) and marijuana. Following the results of the drug screen she said she did not use marijuana around her children. The mother has a hard time financially and has attempted to find employment. She receives cash assistance and help with her housing.

The 13-year-old does not have any known developmental delays, but is very concerned about his mother’s health and worries the cancer will return. He is doing well in school, but does not interact well with his peers, who tend to bully him. The 8-year-old has no reported delays and is doing well in school and is active in sports.

**Concern: Substance Abuse (Adult)**

34. Which of the following statements best represents your view regarding this concern?

- This concern **doesnotrequirearesponse** at this time. **SKIP TO NEXT CONCERN.**

- This concern **mayrequirearesponsethefuture**; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**

- This concern is important but **wouldbeaddressedifthecaseworkersuccessfullymanagedalloftheotherconcerns** identified in this case. **SKIP TO NEXT CONCERN.**

- This concern is of **secondaryimportance** and may be addressed at the caseworker’s discretion.

- This concern **requirearesponse** that would have to be successfully implemented before the case could be closed.

The family consists of a 38-year-old mother (Jessica) and two children: 15-year-old Courtney and 13-year-old Adam.

The agency became involved with the family after it received a phone call from the school nurse. Courtney stated she got into an argument with her mother the night before, because her brother took her charger. It escalated into a physical altercation. Although Courtney said her mother hit her in the face and fell on her knee, causing it to swell, the school nurse said there is no visible injury or physical impairment.

When the caseworker spoke with her, Courtney said she was yelling at her brother for taking her charger, and her mother came into her room. Courtney stated her mother grabbed her by her hair and hit her several times in the face. The caseworker asked her if it was an open or closed fist and Courtney could not recall. Courtney stated that she grabbed her mother’s hands to make her stop. When she did this, Jessica’s boyfriend entered the room to break up the fight. When he pulled Jessica off Courtney, Jessica reportedly fell onto Courtney and onto her knee.

Courtney is currently on an IEP for ED. The school nurse said that Courtney has trouble with relationships and is often involved in dramatic situations. She escalates a situation to the point where someone has to react. Courtney is currently in the 10th grade, and is failing two classes. She has a history of running away and staying at the juvenile detention center.

Upon interview, Courtney has plans of being independent, but until she can she wants to live with her aunt because “she’s old and smells nice”. She is aware she doesn’t have “people skills”, and her remedy is to go to school online so she wouldn’t have to interact with people. To earn a living she would be a writer and write books. Courtney also reported that she would not be able to talk with the caseworker past 12:00 because that is when she “runs the streets”. The caseworker asked what she meant, to which she responded, “I just walk around”. Courtney also reported having some friends that she hangs out with but would not elaborate with any names or what she likes to do with her friends.

Adam is very personable, a student athlete, and makes mostly A's and B's. He is not on an IEP. The school nurse said he avoids trouble and conflict, and is a “great kid”. Adam reported that things are very tense when Courtney is in the home: “She tends to try everything she can to get my mom mad”.

Jessica has no cognitive, physical, emotional, or mental delays that would keep her from providing for the basic needs of her children. Jessica owns several successful businesses. Jessica reports no history with substance abuse and appears to have appropriate parenting practices.

Jessica reports that she does currently have a boyfriend but he does not live in the home. “I am too busy taking care of this house and my businesses to commit to something like that.” Jessica appears to have a great support system.

**Concern: Emotional Behavioral (Child)**
54. Which of the following statements best represents your view regarding this concern?

- [ ] This concern **does not require a response** at this time. **SKIP TO NEXT CONCERN.**

- [ ] This concern **may require a response in the future**; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**

Case 6

The family composition consists of a 31-year-old mother (Amelia), a 35-year old father (Noah), and their daughter, an 11-year old Ava. The parents are divorced, and Amelia’s boyfriend is 28-year-old Ben.

The Agency became involved with the family when it was reported that the 11-year old girl was visiting her mother (Amelia) and the mother’s boyfriend (Ben) came out of the bedroom and slid his hand up her thigh, to her vaginal area and her butt, groping her. There is a reported history of the mother’s boyfriend inappropriately touching the 11-year old, but she did not report this to her mother until recently when this incident occurred over the weekend. The boyfriend has an extensive criminal history and he may be a suspect in another sexual assault, possibly out of state.

The 11 year old girl’s parents have a strained relationship and this has created problems for the child. The child states she really misses and worries about her mother, and never stops thinking about her. The 11-year old has continued to express that she would prefer to live with her mother. The child appears to be depressed. She is currently living with her father, who has custody of her. Custody was awarded to the father because the mother did not use appropriate judgment in the care of her children. The child’s mother had an extensive drug history (Meth) and the child had taken over the role of caregiver to her mother.

The 11-year old girl's father indicated he used marijuana in the past, but not within the last two months.

**Concern: Substance Abuse (Adult)**

66. Which of the following statements best represents your view regarding this concern?

- This concern **doesnotrequirearesponse** at this time. **SKIP TO NEXT CONCERN.**

- This concern **mayrequirearesponseinthefuture**; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**

The family composition consists of a 21-year-old mother (Violet) and her 2-year old daughter (Audrey).

The agency became involved with the family when it was reported the mother was seen using heroin inside a car. The 2-year old girl was in the back seat of the car. The mother then proceeded to lose consciousness and began to throw up in the car. During the course of the assessment/investigation the mother was arrested and charged with drug possession and abuse.

At the time the child was born, her mother tested positive for THC. The baby did not have a positive screen. The mother has had substance abuse problems since age 16. She uses drugs to cope with the problems in her life. She became pregnant at age 16 and gave her child up for adoption. Due to the mother’s drug addiction, she is unable to protect her 2-year old. Violet states she is tired and sad. Observations of the interactions between the mother and child indicate the mother has not bonded and is “just going through the motions.”

**Concern: Substance Abuse (Adult)**

The family composition consists of a 20-year-old mother (Layla) and her 2-year old daughter (Lucy). They are currently residing with the child's maternal grandmother (36-year-old Elizabeth).

The agency became involved with the family when it was reported that Layla was abusing drugs (specifically marijuana) and that she brings her children around others who are using drugs.

Layla recently left an abusive relationship after being punched in the eye; however she downplays the violence. Layla reports feeling stressed, overwhelmed, and angry at times. The grandmother, Elizabeth, reported Layla has learning disabilities and agrees that Layla is angry a lot and does not respond well to stress. The original report included drug involvement by Layla, but the results of her drugs tests were negative.

It was reported that Layla is always grabbing and yelling at her daughter whenever she does something that she does not like. Layla currently does not have any resources to take care of herself and her child. She is reliant on her mother for help.

The 2-year old has some breathing issues and uses a breathing machine and albuterol drops for the machine to use as needed.

**Concern: Substance Abuse (Adult)**

The family composition consists of a 50 year old mother (Audrey), a 50 year old father (Logan), a 17-year old boy (Andrew), a 16-year old girl (Natalie) and a 15-year old girl (Samantha).

The Agency became involved with the family when it was reported the mother (Audrey) and father (Logan) have a long history of substance abuse. The father is verbally abuse to the girls calling them "whore and bitch". The oldest girl has truancy problems and has recently been caught smoking marijuana. The mother has breast cancer and is taking chemotherapy.

While all members live in the same household it was noted the mother and girls stay together while the father and son stay together. Both parents want to separate but are unable to do so because of their finances. The parents will argue in front of their children and the children have selected the parent who they “side” with. When the mother is working, the girls will not go home. Instead, they will go to their friend’s house, because they do not want to be around their father or brother.

The father is verbally abusive and physically assaultive to his 15-year old daughter. The 15-year will “argue” with the father when he is verbally or physically abusive. She recently tried to take her mother’s sleeping pills and was rushed to the Emergency room. She has previously done this. She currently takes Lexapro and Desyrel. She suffers from anxiety, depression, suicidal ideations and cutting. The 16 year old has not coped well with her father’s abusive behavior and her parent’s continuous fights; however, she has been seen for mental health issues (anxiety, depression) and has cut on herself. The 17-year old boy follows his father’s lead and is also verbally abusive toward his sisters. The father is also verbally abusive to the mother.

The father has been diagnosed with bipolar disorder but refuses to go to treatment. The father denies having a substance abuse problem (e.g., marijuana). The father is unable to hold down a job, although he tries to get odd jobs to pay the bills. The mother primarily supports the family and the family receives medical cards for the children and food stamps.

The mother is on anxiety/depression medication due to the stress in the home. She denies having a substance abuse problem (e.g., marijuana). The mother is presently undergoing chemotherapy.

Due to issues that have been occurring in the family all three children have missed a lot of school.

**Concern: Financial Distress**

☐ Somewhat likely

☐ Somewhat unlikely

☐ Very unlikely
Thank you for completing this survey
TAB 2 GOES HERE

Case Work Expert Survey #2
Welcome

Thank you for agreeing to assist the Ohio Department of Job and Family Services (ODJFS) in identifying the variety of child welfare services that are needed for children and families coming to the attention of public child welfare agencies.

This survey requires you to read short summaries, or vignettes, of 9-10 cases. These vignettes represent a random subset of 39 vignettes that experts around the country are evaluating as part of this study. The vignettes represent real cases in Ohio, and vary in complexity and amenability to interventions. The arbitrary case numbers you'll see may not be consecutive.

Associated with each vignette are anywhere from 1 to 18 concerns. These concerns were identified by child welfare caseworkers when they assessed the families. You will find these concerns to have generally straightforward connections to the details presented in the vignette.

The following are instructions you are requested to follow:

- You will be asked to provide your opinion about the need to address each concern and make recommendations for services. These vignettes should be read as if the case is at the point where services are being planned. It will sometimes be challenging, based on the information provided, to know what to recommend.

- In making your recommendations, please assume that each case is being managed by a competent, well-supervised worker who meets professional standards in terms of his or her ability to engage and assess families, plan and coordinate services, evaluate progress, and deal with diversity issues. You should assume the caseworker is a service coordinator, though, and not a service provider.

- Not every concern identified requires a service referral (that is, a “response”). You will have the option of stating, based on the information provided, that no service referral is needed at the present time.

- Before evaluating the cases, you will be asked a few questions about your professional qualifications.

- Often you will be asked to recommend specific interventions. These are interventions that ODJFS has identified as potentially relevant to some children's services cases. It would be highly unusual if you were familiar with all of these interventions, or perhaps even most of them. Please do not be concerned about interventions with which you are unfamiliar; simply focus on selecting interventions from among those with which you are familiar.

We acknowledge that some of the judgments you are being asked to make are challenging. If you believe that a judgment is simply not possible given the available information, you may choose to leave that question blank.

The results of this study will be used to improve children's services in Ohio. ODJFS will see only aggregate responses across all of the experts being surveyed. Your responses will be kept strictly confidential.

Given that only professional judgments are being solicited, that the goal of the research is system improvement, and that your responses will not be attributable to you, this research has not been submitted to an Institutional Review Board for review.

We are grateful for your time completing this survey as it will help to improve services. Thank you.

The family consists of 22-year-old Emily, and 5-year-old Ethan. Ethan’s father is 25-year-old Alex. Alex lives with his mother, 48-year-old Lily. Ava, who is 47 years old, is Emily’s mother.

Emily and Ethan, recently moved into her mother’s home, and Emily has left Ethan in her mother's care. Ava has an open case with the agency. She is diagnosed with Paranoid schizophrenia and refuses to remain on medication. She is prone to violent outbursts, and has an extensive criminal history. She also uses crack, cocaine, marijuana. Because she is not compliant with her medication, her two children are in the agency’s custody.

Ethan is a 5-year-old male with no reported delays or issues. He was able to hold a clear conversation with the caseworker. He is not enrolled in school or daycare, but was able to spell his name for the caseworker. He told the social worker than his grandmother (Ava) speaks of evil spirits. Two days before the agency became involved with Emily and Ethan, Ava stabbed her boyfriend. Ethan witnessed the attack.

Emily has no reported cognitive issues, but does speak slowly. She understands the risk of putting Ethan in the care of her mother, but she states she has to live with her mother because she doesn’t have any other place to live. She reported that she completed the 11th grade. Emily was accidently shot several years ago and she has some back pain and limps because of the injuries. She denied any mental health issues, but feels a lot of stress coping with her mother, trying to raise her son, and coping with her gunshot injury. She denies abuse substances, but others have said she smokes marijuana.

Emily’s former boyfriend and Ethan’s father, Alex, has cared for Ethan. Alex is living with his mother, Lily, who has also cared Ethan. Ethan reportedly does well there, and appears positively bonded to Alex and Lily. Alex is currently unemployed, but is looking for work.

Alex has no reported cognitive issues and spoke easily with the caseworker. He stated that he completed the 11th grade. He denied any mental or physical health issues for himself. He also denied any current or past domestic violence. He denies any current substance use. He stated that he walks away from the situation when he is stressed. He also denied having to use any discipline for Ethan.

**Emotional Illness (Adult)**

6. Which of the following statements best represents your view regarding this concern?

- [ ] This concern doesnotrequirearesponse at this time. **SKIP TO NEXT CONCERN.**
- [ ] This concern mayrequirearesponseinthefuture; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**
- [ ] This concern is important but wouldbeaddressedifthecaseworkersuccessfullymanagedalloftheotherconcerns identified in this case. **SKIP TO NEXT CONCERN.**
- [ ] This concern is of secondaryimportance and may be addressed at the caseworker’s discretion.
- [ ] This concern requiresaresponse that would have to be successfully implemented before the case could be closed.
7. How strongly do you agree or disagree that this case should be referred for assessment and intervention planning by an organization qualified to address this concern?
○ Agree strongly
○ Agree

- Somewhat likely
- Somewhat unlikely
- Very unlikely

21. How likely would there be a substantial benefit from services intended to address this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely
An Emergency Department physician referred 7-year-old Emma to an orthopedic physician for a left hand fracture. The orthopedic physician called the agency.

Emma and her 12-year-old sister, Alice, were arguing, and their father, Levi, told them to stop. Emma started to walk away from him, and he grabbed her hand. She started to cry and said her hand hurt. The physician stated the bruising on Emma’s hand was “extreme” with dark greenish black bruising around the entire top part (palm down) of her left hand and the last two digits. Emma is diagnosed with a Type 2 fracture of the left metacarpal. Her hand was put in a cast which she will wear for two weeks. Additional x-rays will be done at that point to determine if she will require another cast. The physician is concerned about Emma’s poor hygiene. He noted that she was unkempt, wearing dirty clothing and smelled of perspiration.

Upon interviewing the parents, they appear to be in a very chaotic relationship, with little to no awareness how their faulty communication patterns impact their three children. They have no insights on why their children have oppositional behaviors. Both parents display a range of emotions, including anger, anxiety, frustration, distrust, and submission. On several occasions, according to Lily, Levi has hit her when he becomes angry and intoxicated, but always apologizes after he soberes up. Lily’s behavior swings from being impulsive and erratic to gentleness and concern.

Lily states that Alice has her own behavior problems. She acts very seductively to boys in the neighborhood. Seven years ago, Alice was sexually abused by a male cousin, who no longer has contact with the family. However, Lily states, he is in her nightmares, which she has a couple of times a month.

Although Lily and Levi are able to provide for their children’s physical needs, they do not understand that children need authority and discipline. Emily does not want to discipline them and prefers to pacify them. As such, Lily and Levi are disengaged, and uninvolved to the point of dismissing the children’s emotions and opinions. Although it does not appear that the parents use narcotics, their use of alcohol is almost daily.

**Concern: Sexual Abuse (Child)**

22. Which of the following statements best represents your view regarding this concern?

- This concern **does not require response** at this time. **SKIP TO NEXT CONCERN.**

- This concern **may require response in the future**; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**

- This concern is important but **would be addressed if the caseworker successfully managed all of the other concerns** identified in this case. **SKIP TO NEXT CONCERN.**

- This concern is of **secondary importance** and may be addressed at the caseworker’s discretion.

- This concern **requires response** that would have to be successfully implemented before the case could be closed.
23. Following are several evidence-based interventions that can be appropriate for some people who experience sexual abuse as a child. Select all interventions you would recommend for this case.

☐ Trauma-Focused Cognitive Behavioral Therapy
☐ Multisystemic Therapy for Child Abuse and Neglect
☐ Children with Problematic Sexual Behavior - Cognitive Behavior Therapy
☐ Trauma Systems Therapy
☐ Trauma Affect Regulation
☐ Prolonged Exposure Therapy for Adolescents
☐ Cognitive Processing Therapy
☐ Other Interventions

The family composition consists of a 32 year old mother, a 10 year old girl, a 5-year old girl, and a 3-year old boy. The father of the two youngest children is in prison.

The Agency became involved with the family when it was reported the mother and her three children were homeless. The mother has no income, receives food stamps and a medical card.

The children do not seem to have any significant delays and appear to be adequately cared for. However, due to the instability of the mother's housing situation her older daughter has not been attending school on a regular basis and may be at risk of having social and developmental problems.

The mother does not appear to have any cognitive delays, substance abuse problems, but feels an enormous about of stress. She and her children had been living with friends and other family members while trying to locate housing. However, she has left her children with her friends/family and will not return to her children until the next day. The mother has not been able to obtain employment. The mother reports she has had unstable housing since the children's father was incarcerated for selling drugs and breaking and entering.”

**Concern: Maladaptive Response to Stressors (Parent)**

The family composition consists of a 72 year old grandfather (William), a 63 year old grandmother (Grace), 44 year old mother (Natalie) of the children, who are Chris (14 years old) and Samuel (12 years old). All reside at grandparents’ home.

The family’s involvement with the agency occurred when it was reported that the 14 year old (Chris) and the 12 year old (Samuel) had been sleeping in a car outside of their grandparents’ home because their grandmother (Grace) stated they misbehaved and she did not want them in her home. The two youths have not been attending school. They were filthy and had not eaten. The children and their mother have been living with her parents for years and the grandmother has been taking care of her grandchildren with the older children looking after the younger children. It was reported the mother comes and goes.

Periodically, there is domestic violence between the grandmother and her daughter. The last argument concerned the grandmother wanting the daughter to obtain a job and secure her own housing for herself and children. The father of the children does not provide assistance to his family and the children have limited contact with him.

Children attend school and are doing well academically.

The mother indicates that she becomes depressed at having parenthood responsibilities as she has chronic back pain from an automobile accident. She responds to stress by fleeing and smoking marijuana. She has often left her children in the care of her mother. While living with her parents she does not help her mother care for the children.

**Concern: Financial Distress**

Case 14

The family consists of parents Ryan (39 years old) and Rachel (37 years old), and four children: Cathy is 17 years old, Julie is 14 years old, Fred is 11 years old, and Nathan is 9 years old. The parents have been divorced for 7 years.

The agency became involved with this family when the police notified them that the children's mother was extremely depressed and threatening to kill herself in front of the children. The police took the mother to the emergency room for assessment and treatment.

The children's father stated that he divorced Rachel because of her fragile emotional state and her refusal to stay on medication. The court granted him full custody of the children with Rachel being permitted weekend visitation rights. Ryan states that when she is on her medication, she is very loving toward the children and would never harm herself or them. When she does not take the medication, she goes into irrational rages and threats to harm herself and/or others.

The two oldest children are high performing in school and in music, and are very socially inclined. The two younger children also excel at school and are involved in sports.

The 11-girl's parents have a strained relationship and this has created problems for the child. The child states really misses and worries about her mother, and never stops thinking about her. The 11-year old has continued to express that she would prefer to live with her mother. The child appears to be depressed. She is currently living with her father, who has custody of her. Custody was awarded to the father because the mother did not use appropriate judgment in the care of her children. The child's mother had an extensive drug history (Meth) and the child had taken over the role of caregiver to her mother.

The 11-year old girl's father indicated he used Marijuana in the past, but not within the last two months.

**Concern: Emotional Illness (Parent)**

Case 15

The family consists of the mother Hazel (32 years old), the stepfather Henry (41 years old), and Penelope, who is 12 years old. Jack is 35 years old, and divorced from Hazel. He has visitation rights with his daughter, Penelope.

The agency became involved with this family when it learned that the 12 year old, after visiting her mother and stepfather, returned to her father's home with a bruised arm, and head lice. She states the bruised arm was the result of being punched by her step-father. She states her mother uses heroin, and her stepfather is verbally cruel to her. In addition, Penelope states he has kicked her, hit her, and thrown her across the room. To support their drug habit, they steal from national stores. Henry was discharged from the military and has post-traumatic stress syndrome.

Penelope reported that Henry hits her mom in front of her. Penelope is frightened to go back to her mom's home.

The family consists of the parents Diane and Dave, ages 30 and 33 respectively, and four children: Zoe (9 years old), Parker (5 years old), Colton (7 years old), and Dillon (2 years old).

The agency became involved with this family when an emergency room nurse reported that Dillon was in the emergency room with a hematoma on his head. The parents said an older sibling tripped over him and caused the injury. As a precaution, a full skeletal x-ray was done and there were no pathological findings.

When the caseworker met with the parents, they said Dillon has Down’s syndrome. They deny any domestic violence, substance abuse, or alcohol problems. They appear to be using good parenting skills and Dillon is involved with a variety of service providers and they are present several times a week. Current plan is to have him begin preschool when he turns three.

Zoe, Parker, and Colton attend their local public school, and are doing well. The schools report no behavior problems, and none were observed. Parents are using good parenting skills and stress doesn’t affect the care of the children.

Good interaction was observed between all family members. They are able to make sure the children have their needs met. They are aware of agencies in the area that can help them if needed.

**Concern: Physical Cognitive Social (Child)**

The family composition consists of a 51-year-old stepfather (Charles) and a 17-year-old pregnant teen (Cathy). Cathy’s mother is not involved in her care. Her whereabouts are unknown.

The Agency became involved with the family when it was reported that Charles hit the 17-yr-old (Cathy). Parties agree that the confrontation began with Cathy hitting Charles, and in response, Charles punched Cathy, causing a mark on her face. Charles and Cathy agree that the altercation occurred because Charles refused to allow her to live with her 29-year-old boyfriend. The stepfather, furious about the 29 year old’s involvement and resulting pregnancy tried to press charges with the police cause she is under age. The police would not take the case due to the Cathy’s age and consent. Cathy is currently 8 months pregnant, attends school, and has no reported cognitive delays.

Cathy stated that she is fearful of her step-father because she says he has a drinking problem and might be using cocaine. The step-father denies any criminal history, substance abuse and domestic violence.

149. How likely would there be a substantial benefit from services intended to address this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely
The family consists of a 38-year-old mother (Rose), a 15-year old girl (Ruth), and a 17-year old boy (Ron).

The Agency became involved with the family when it was reported that there is no gas on in the home and the electricity was connected illegally. The family has one electric heater, but the home is still cold. The 15 year old girl (Ruth) is seeing a 31 year old neighbor, and she is pregnant. The police are often asked to respond to the home, because the 17-year-old (Ron) breaks windows. It was also reported the mother drinks everyday while the children are home.

During the home visit, the utilities were on. However, the mother did indicate that she was behind in paying her utility bill. She is currently unemployed and receives food stamps. Her family has been assisting her in paying her rent. She plans on moving in with her mother next month.

Both her children have school truancy problems and the mother has tried to enroll them in an online program. No efforts have been made to determine how far along the youth is in her pregnancy.

**Concern: Teen Pregnancy**

150. Which of the following statements best represents your view regarding this concern?

- This concern **doesnotrequirearesponse** at this time. **SKIP TO NEXT CONCERN.**
- This concern **mayrequirearesponseinthefuture**; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**
- This concern is important but **wouldbeaddressedifthecaseworkersuccessfullymanagedalloftheotherconcerns** identified in this case. **SKIP TO NEXT CONCERN.**
- This concern is of **secondaryimportance** and may be addressed at the caseworker's discretion.
- This concern **requiresaresponse** that would have to be successfully implemented before the case could be closed.

Thank you for completing this survey
TAB 3 GOES HERE

Case Work Expert Survey #3
Welcome

Thank you for agreeing to assist the Ohio Department of Job and Family Services (ODJFS) in identifying the variety of child welfare services that are needed for children and families coming to the attention of public child welfare agencies.

This survey requires you to read short summaries, or vignettes, of 9-10 cases. These vignettes represent a random subset of 39 vignettes that experts around the country are evaluating as part of this study. The vignettes represent real cases in Ohio, and vary in complexity and amenability to interventions. The arbitrary case numbers you'll see may not be consecutive.

Associated with each vignette are anywhere from 1 to 18 concerns. These concerns were identified by child welfare caseworkers when they assessed the families. You will find these concerns to have generally straightforward connections to the details presented in the vignette.

The following are instructions you are requested to follow:

- You will be asked to provide your opinion about the need to address each concern and make recommendations for services. These vignettes should be read as if the case is at the point where services are being planned. It will sometimes be challenging, based on the information provided, to know what to recommend.

- In making your recommendations, please assume that each case is being managed by a competent, well-supervised worker who meets professional standards in terms of his or her ability to engage and assess families, plan and coordinate services, evaluate progress, and deal with diversity issues. You should assume the caseworker is a service coordinator, though, and not a service provider.

- Not every concern identified requires a service referral (that is, a “response”). You will have the option of stating, based on the information provided, that no service referral is needed at the present time.

- Before evaluating the cases, you will be asked a few questions about your professional qualifications.

- Often you will be asked to recommend specific interventions. These are interventions that ODJFS has identified as potentially relevant to some children's services cases. It would be highly unusual if you were familiar with all of these interventions, or perhaps even most of them. Please do not be concerned about interventions with which you are unfamiliar; simply focus on selecting interventions from among those with which you are familiar.

We acknowledge that some of the judgments you are being asked to make are challenging. If you believe that a judgment is simply not possible given the available information, you may choose to leave that question blank.

The results of this study will be used to improve children’s services in Ohio. ODJFS will see only aggregate responses across all of the experts being surveyed. Your responses will be kept strictly confidential.

Given that only professional judgments are being solicited, that the goal of the research is system improvement, and that your responses will not be attributable to you, this research has not been submitted to an Institutional Review Board for review.

We are grateful for your time completing this survey as it will help to improve services. Thank you.

The family composition consists of a 57 year old grandmother (Claire), a 26 year old mother (Hannah), of two children, a 7-year old girl (Abby) and a 5-year old girl (Zoey). The girls have different fathers. The mother is legally married to Oliver, the father of 5-year old Zoey, and divorced from Ryan, the father of 7-year-old Abby.

Agency involvement with the family began when it was reported that Hannah was not taking her medication for her Bi-Polar disorder, and she was drinking and driving while the two children were in the car. The reporter also stated that the mother keeps the children out until 2 o’clock in the morning, and associates with people who sell drugs. It was noted the mother smokes marijuana in front of the children and had drug paraphernalia in her car.

The mother was diagnosed with Bi-polar disorder when she was 15 and has been on medication. She indicated she has not been on medication since she left Oliver, the father of 5-year old Zoey. She states that Oliver had been verbally and emotionally abusive to her and she filed a Temporary Restraining Order against him.

She states that Ryan, the father of 7-year-old Abby, was also abusive toward her. Hannah’s mother (Claire), with whom she and her children are currently living, states Hannah has stopped taking her medication and is much calmer.

Hannah indicates she drinks occasionally, but does not drink and drive. At the time, the family came to the attention of the agency, there were no DUI convictions. However, she is currently charged with driving under the influence and drug paraphernalia in the car. Hanna currently works and her mother, Claire, cares for the children when Hannah is working.

The father of the 5-year-old has not lived with Hannah for two years. He reported that when he was with his child’s mother, she was not addressing her mental health problems and she was seeing another man. He then terminated the relationship. His contact with his daughter is infrequent and that is because of Hannah’s fragile emotional state. Domestic violence charges were filed against him by his wife. He has charges against him for driving under the influence of alcohol, smoking marijuana, trafficking drugs and has his driver’s license suspended.

The father of the 7-year old does not know the needs of his child since he has infrequent contact with her. While he was living Hanna, domestic violence charges were filed against him. He is currently working in construction.

The 7-year old is communicative, looking forward to returning to school, and is extremely active. According to Claire and Hannah, she has a very short attention span. They have not had her evaluated. The 5 year old is shy but very energetic. The 5 year old is up-to-date on shots and has no known medical or mental health concerns.

**Concern: Domestic Violence (Adult)**

6. Which of the following statements best represents your view regarding this concern?

- This concern **doesnotrequirearesponse** at this time. **SKIP TO NEXT CONCERN.**

- This concern **mayrequirearesponseinthefuture**; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**

- This concern is important but **wouldbeaddressedifthecaseworkersuccessfullymanagedalloftheotherconcerns** identified in this case. **SKIP TO NEXT CONCERN.**

- This concern is of **secondaryimportance** and may be addressed at the caseworker’s discretion.

- This concern **requiresaresponse** that would have to be successfully implemented before the case could be closed.
7. Following are several evidence-based interventions that can be appropriate for some people who experience domestic violence. Select all interventions you would recommend for this case.

☐ Community Advocacy Project
☐ Family Thriving Program
☐ Prevention and Relationship Enhancement Program
☐ Prolonged Exposure Therapy for PTSD for Adults
☐ Seeking Safety for Adults
☐ Healthy Families America
☐ Narrative Exposure Therapy
☐ Other Interventions

8. How likely would the family be to fully cooperate in obtaining services to address this concern?

☐ Very likely

The family composition consists of a 40 year old mother (Anna), and 39 year old father (James) and two children. The parents are divorced, and the father has visitation rights. The children are a 13-year old boy (Jace) and a 12-year old girl (Jackie).

The Agency became involved with the family when the father, who is caring for the children for one month during the summer break, determined the mother (Anna) was over medicating her two children. The father counted the pills and noticed the counts were significantly off. When he called Anna, she told him to ignore it and replace the missing pills from the pills in the other bottles. She claimed the pharmacist made a mistake in counting. James called the pharmacist who said their counts are correct. He also reported her home, where the children live, is dirty and infested with roaches. They live in a trailer, which has seven people in it.

The 13-year old has been diagnosed with ADHD and is taking Ritalin. The 14-year old also has been diagnosed with ADHD and is taking Ritalin, Concerta and Focalin. It was observed that the children have a close relationship with their mother and father. The mother is currently employed and has no known substance abuse problems.

The father of the children has a history of domestic violence against his children’s mother.

**Concern: Domestic Violence (Adult)**

Case 19

The family composition consists of a 36 year old mother (Charlotte), a 36 year old father (Charlie), a 5 year old girl (Chris) and a 3 year old boy (Nathan).

The family’s involvement with the Agency occurred when it was reported the 3-year old (Nathan) was found alone in the front porch, as the mother was asleep in the house. Mother stated her psychiatrist modified her anti-depressant medication and change caused her to fall asleep. The father was at work.

Both children are up-to-date with their shots. There are no concerns about family roles, interactions or relationships. The children are treated fairly and there are no known unrealistic expectations in the home.

Both parent work and both have strong family support systems. The mother has been diagnosed with depression and anxiety and is currently taking Cymbalta.

**Concern: Abused, Neglected and Dependent Child**

46. Which of the following statements best represents your view regarding this concern?

- This concern **doesnotrequirearesponse** at this time. **SKIP TO NEXT CONCERN.**

The family consists of 27-year-old Paige and her 5-year-old son, Paul. Peter is her 29-year-old boyfriend.

The agency became involved with this family when it received a call from the police stating there was a child (age 5) who was left alone.

Paige, the 27 year old mother, stated that she has a substance abuse problem, which impacts her judgment and parenting skills. She has used several substances sporadically over the last 7 years, but she was clean for 5 of those.

She stated that when she was pregnant nearly 7 years ago, she was having a lot of back pain. Her physician prescribed Vicodin, and she became addicted. When she delivered her son, Paul, he tested positive for Vicodin. She states that Paul now seems hyper-vigilant and easily distracted. She worries it might be the result of the lasting effects of Vicodin addiction. After Paul was born, she entered treatment and was clean for nearly five years. Now, for the last six months, she has been using heroin and cocaine.

She obtains the drugs from her boyfriend, of eight months, who lives with her. Paige stated that her boyfriend, Peter, is a drug dealer. She would like to leave her boyfriend, but she is dependent on him for financial resources. She feels alone and isolated.

Paige stated that she has no past or current issues with domestic violence, but has a history of depression including thoughts of hurting herself. On several occasions, she has acted on those thoughts and has superficially cut her arms and legs. She has been prescribed medication to help her depression and anxiety; however, she does not take it because she does not like the side effects. She has no contact with family members, and her field of social supports is very limited.

Paul attends pre-school and makes friends easily. He is up to date on his vaccinations.

**Concern: Financial Distress**

58. Which of the following statements best represents your view regarding this concern?

- This concern **does not require a response** at this time. **SKIP TO NEXT CONCERN.**

- This concern **may require a response in the future;** the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**

- This concern is important but **would be addressed if the caseworker successfully managed all of the other concerns** identified in this case. **SKIP TO NEXT CONCERN.**

- This concern is of **secondary importance** and may be addressed at the caseworker’s discretion.

- This concern **requires a response** that would have to be successfully implemented before the case could be closed.
59. Following are several evidence-based interventions that can be appropriate for some people who experience financial distress. Select all interventions you would recommend for this case.

- Workforce Investment Boards
- SNAP Program
- Family Self-Sufficiency Program
- Child Support Program
- Family Connections
- Adult Focused Family Behavior Therapy
- Other Interventions

The family composition consists of a 21 year old mother (Anna), a 1-year old girl (Samantha) and the mother's 26-year old boyfriend (Dylan). The mother is divorced from her child’s father.

The Agency became involved with the family when it was reported a 1 year-old was brought to the emergency room with bruises on her face, bruises in/behind the her ears, pain in her right arm (appears to be a grab mark). The hospital is performing a CAT scan.

The mother and boyfriend’s explanation of the child’s injuries are inconsistent with the injuries found on the child. During the period in question the only persons who had access to the child was the child's mother and boyfriend.

The child does not appear to have any cognitive/physical delays and has received her immunizations.

The mother has been with her boyfriend for about 8 months. The mother has heard the boyfriend yelling and fighting with her child. The mother is reported to be very emotional and talks about committing suicide. The mother denies any domestic violence; however others have heard verbal abuse between the mother and boyfriend in the past. The mother reports marijuana and recent heroin use. The mother does not believe her boyfriend abused her child. The boyfriend had a prior history of drug use (heroin). He is currently working and has a high school diploma.

The family composition consists of a 31 year old mother (Addison), Addison’s 9 year old daughter (Chloe), Addison’s 8 year old son (Matt) and mom’s 28 year old ex-boyfriend, Lucas.

The Agency became involved with the family when it was reported that Addison’s daughter (Chloe) observed Addison’s ex-boyfriend (Lucas) hitting her mother. The mother stated Lucas did not hit her; however, he broke into her apartment and would not leave. She called the police and he was arrested for Domestic Violence.

The mother states she has no cognitive and physical health problems. Following her divorce nine months ago, the mother became depressed but she felt that was “situational.” At that time she obtained antidepressant medication from her physician. The mother admits to drinking alcohol daily but does not view this as a problem. No drug and alcohol related arrests were found. It was noted the mother posts sexually suggestive pictures of herself on Facebook and she feels that she dates “broken” guys and tries to “fix” them. This makes her feel better in “contributing to their lives.”

Both children were developing within the normal range and there were no concerns noted of any physical, cognitive, social or behavioral delays. Matt is not very verbal. Both children are reported to be “well-bonded” to their mother.

The family composition consists of a 39-year mother (Sophia), a 50-year old father (Scott), a 24-year old son (Ben), an 18-year old son (Brandon) and a 13-year old son (Brian).

The Agency became involved when it was reported the two adult children residing in the home were arrested for manufacturing methamphetamine in the home and they had physically abused their younger brother (Brian).

The police searched the house and did not find any equipment, but did find an abundance of chemicals for meth manufacturing. The mother denied having knowledge that her two sons were manufacturing meth. Her oldest son, Ben, remains in jail on the charge. Both parents stated, “That’s where he needs to be and we don’t want him back here."

The mother has an “old back” injury caused from doing manual labor in a factory. She has been receiving pain medication for the past 15 years. She takes morphine every 12 hours and oxycodone 5 mg, three times a day. Her physician is trying to wean her off the medication. Emotionally, she struggles with depression, anxiety, and has panic attacks. She is receiving psychotropic medication. Having osteoporosis, she recently dislocated and broke her ankle and had surgery to implant a metal rod and screws. She states her physician does not recommend she work.

Scott has severe Rheumatoid Arthritis (RA) and has had several surgeries on his left arm, back, neck, and hip for multiple joint replacements, several of which have been unsuccessful. He has had RA since he was a child. He is unable to work and receives disability. He currently takes OxyContin, Percocet, and Tramadol. The rheumatologist is concerned about the high doses of medication but he sees no other option in trying to get Scott to function. He is facing additional surgeries for his knees.

When Sophia was pregnant with Brian, Scott was arrested for domestic violence. Sophia and Scott said that since then, there has been no domestic violence. However, domestic violence has occurred between Scott and their adult son Ben. The police have been called on several occasions to get Ben to leave the house.

Sophia, Scott, and Brandon completed mouth swab drug tests. Sophia and Brandon’s tests were negative, however Scott’s test was high for Oxycodone, Oxymorphone, and Tramadol. The caseworker spoke with Scott’s physician, who stated he is on substantial doses of medication, but there is no other choice considering the substantial damaged to Scott's skeletal system.

The youngest son (Brian) seems to be developmentally on target and has age appropriate chores. Sophia and Scott state they do not discipline him because he is very well-behaved and does what they ask him to do. Brian appears comfortable with Sophia and Scott.

When he spoke of his bothers getting arrested, he began crying. He did not want to discuss how his older brother abused him and left bruises on his arm. Sophia gave him a hug and he sat on her lap.

He is in the 7th grade and receives good grades (B’s and C’s). Brain’s school reports no problems with him and he has excellent attendance.

Supervision, food, clothing, shelter, and hygiene needs are adequately met.

**Concern: Emotional Illness (Adult)**

- Somewhat likely
- Somewhat unlikely
- Very unlikely
The family composition consists of a 33-year old mother (Ava), a 10-year old girl (Kris), an 8-year old girl (Vivian), a 5-year old girl (Abby) and a 4-year old boy (Wyatt).

The Agency has a lengthy history of involvement with this family. The children’s father had been very abusive to Ava. The father has had no contact with the family in the past year.

The mother is extremely depressed, anxious, and has a history of overusing her anti-anxiety medication. It is difficult for her to plan and she get caught up in things she cannot control (e.g., her neighbor’s problems, sister’s problems), making it difficult for her to plan her own life. Rather than dealing with her issues directly, she procrastinates without realizing how self-defeating it is, which often intensifies her financial burdens. Her emotional and cognitive problems impact her parenting skills.

Recently it was reported the 8-year old child was making sexually inappropriate statements, transmitted in a note, to a classmate. The classmate stated all she did was receive the note from her classmate and there had been no sexual contact. The 8-year old admitted to sending the note. Additionally, it was mentioned that the neighbor’s grandson touched her in her “privates”. The 8-year old and her 10-year old sister had been sexually abused while in foster care but they did not report it right away.

The 8-year old had been prescribed Focalin for her ADHD symptoms. The mother indicated the medication caused her daughter to begin wetting herself, which led to a lot of emotional distress. The mother reported her physician stated she should wean her daughter off the medication and then have her re-evaluated.

**Concern: Parenting Difficulties**

145. Which of the following statements best represents your view regarding this concern?

- This concern **does not require a response** at this time. **SKIP TO NEXT CONCERN.**

- This concern **may require a response in the future**; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**

The family composition consists of a 33-year old father (Anthony), a 26-year old mother (Amy), an 8-year old child (Sara) and a 7-year old child (Kelly).

The Agency became involved with the family after being contacted by the police. The parents have been married for approximately one year. The police were called to the house because Amy was being assaulted and Anthony was destroying the contents of the home while the two young children were present. There have been at least two previous domestic violence episodes which resulted in a restraining order being placed on Anthony. Nonetheless, Amy allows Anthony to stay in the home. Anthony is currently in jail. The police expressed concerns about the housing situation for the family, as it is dirty, has cockroaches, and is chaotic.

Amy is six months pregnant. She attends all prenatal appointments. She denies any substance use.

The mother reports she is able to care for her two children. The children share a queen sized bed in one bedroom. Amy has another queen sized mattress in another room and reported they did not use the other bedroom since it was very cold. She reported they usually all slept together or she sleeps on the couch.

The family does not have a stove. The mother cooks meals using a hot plate, microwave, or Foreman grill. At the time of the home visit there was food in the refrigerator and cupboards for the children. When the caseworker spoke to Amy, she denied any mental health issues, but seemed to have a depressed affect. She minimizes the domestic violence history, but states there were multiple incidents of domestic violence.

Sara is 8-years old, and has a disability which causes her difficulty in maintaining her balance. Sara’s teacher says she is very defiant at school and frequently acts out.

Kelly’s doctor has recommended she see a speech therapist and audiologist and get caught up on her shots. Kelly is currently on an IEP and does not have any behavioral problems at school. The school stated she is frequently sick and has a runny nose. School staff stated the mother does not follow through when they ask her to do something and does not take the initiative to do things without their suggestion.

The agency became involved with this child one year ago when his mother died of a sudden heart attack. His father is in prison in a distant state serving two life sentences without parole for murder. He has never had contact with his father. With no immediate family able to care for David, the agency obtained custody and placed him in a foster home. He is intellectually bright-normal, but suffers depression from the loss of his mother and persistently worries of what will happen to him in the future.

He likes his foster home, but does not expect them to be involved with him after he reaches 18. In working with the foster parents, their long-term intent in remaining involved with David is not clear. He gets along well with others, but he is fearful of becoming attached because of the potential and unpredictable loss. He has limited contact, mostly by phone, with his maternal grandparents because the live 1200 miles away. Their health is very fragile and they are unable to provide sustained physical or emotional support to David.

Sports and video games are David's primary outlets. Not wanting to be adopted, David is scheduled to age-out of foster care in less than one year.

Thank you for completing this survey
Case Work Expert Survey #4
Welcome

Thank you for agreeing to assist the Ohio Department of Job and Family Services (ODJFS) in identifying the variety of child welfare services that are needed for children and families coming to the attention of public child welfare agencies.

This survey requires you to read short summaries, or vignettes, of 9-10 cases. These vignettes represent a random subset of 39 vignettes that experts around the country are evaluating as part of this study. The vignettes represent real cases in Ohio, and vary in complexity and amenability to interventions. The arbitrary case numbers you'll see may not be consecutive.

Associated with each vignette are anywhere from 1 to 18 concerns. These concerns were identified by child welfare caseworkers when they assessed the families. You will find these concerns to have generally straightforward connections to the details presented in the vignette.

The following are instructions you are requested to follow:

- You will be asked to provide your opinion about the need to address each concern and make recommendations for services. These vignettes should be read as if the case is at the point where services are being planned. It will sometimes be challenging, based on the information provided, to know what to recommend.

- In making your recommendations, please assume that each case is being managed by a competent, well-supervised worker who meets professional standards in terms of his or her ability to engage and assess families, plan and coordinate services, evaluate progress, and deal with diversity issues. You should assume the caseworker is a service coordinator, though, and not a service provider.

- Not every concern identified requires a service referral (that is, a “response”). You will have the option of stating, based on the information provided, that no service referral is needed at the present time.

- Before evaluating the cases, you will be asked a few questions about your professional qualifications.

- Often you will be asked to recommend specific interventions. These are interventions that ODJFS has identified as potentially relevant to some children's services cases. It would be highly unusual if you were familiar with all of these interventions, or perhaps even most of them. Please do not be concerned about interventions with which you are unfamiliar; simply focus on selecting interventions from among those with which you are familiar.

We acknowledge that some of the judgments you are being asked to make are challenging. If you believe that a judgment is simply not possible given the available information, you may choose to leave that question blank.

The results of this study will be used to improve children’s services in Ohio. ODJFS will see only aggregate responses across all of the experts being surveyed. Your responses will be kept strictly confidential.

Given that only professional judgments are being solicited, that the goal of the research is system improvement, and that your responses will not be attributable to you, this research has not been submitted to an Institutional Review Board for review.

We are grateful for your time completing this survey as it will help to improve services. Thank you.

The agency became involved with the family when Kaylee’s teacher stated that Kaylee reported their father and his girlfriend spent the weekend “doing all sorts of pills”. The teacher states the family had been living in another city with the children’s grandfather. The grandfather grew tired of the father’s drug abuse and told them to leave. The father and children are now living with the father’s ex-wife (children’s mother). The teacher knows the mother and is certain she is not using drugs.

Joe appeared to be of the average intelligence. He works full-time as an electrician. Because of a chronic vertebra problem and two shoulder surgeries, he uses Vicodin and Percocet. He states he takes about five pills per day and does not get euphoric from them, but needs them for his daily life. He also complains of problems with his colon, kidneys, and cirrhosis of the liver. He stated he has never done pain management but wants help. He reported no mental health problems. He reported that besides the pills he does not use other substances, although he reported using heroin ten years ago. He stated he did believe he had a problem with alcohol eight years ago, but doesn’t drink regularly. He stated he went to a bar a month ago. He reported to have contact with his children and that their relationships are getting closer. He reported that spending more time with them is helping him through these hard times. He reported that he is no longer involved with Alexis and plans on dating a girl without a substance abuse problem because it will help make things easier.

Anna presented as an adult of average intelligence, without medical or mental health issues. She stated she has no history of domestic violence or drug use. She works full-time as an insurance agent. She stated she has an occasional drink every few weeks. She was calm and cooperative throughout the investigation. She was observed to interact with the children positively and spoke of age appropriate expectations of them.

Kaylee is 17 a year old female who is able to recognize abuse and neglect and is likely able to remove herself from harm as needed due to her age. She currently attends a vocational school, wants to be a cosmetologist, and is usually on the honor roll. She stated she went to a therapist when she was younger because she had ADHD. She took Ritalin, but stopped because she doesn’t like taking pills, and doesn’t feel like she needs to be on medication.

Evan is 13 years old in the 7th grade, average height and weight, without developmental delays. He stated he is getting good grades and loves playing video games. Chris stated he was diagnosed asthma when he was 8 years old, but hasn’t had any asthmatic attacks since he was 9. He is on no medication.

### Concern: Substance Abuse (Adult)

6. Which of the following statements best represents your view regarding this concern?

- [ ] This concern doesnotrequirearesponse at this time. **SKIP TO NEXT CONCERN.**
- [ ] This concern mayrequirearesponsethefuture; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**
- [ ] This concern is important but wouldbeaddressedifthecaseworkersuccessfullymanagedalloftheotherconcerns identified in this case. **SKIP TO NEXT CONCERN.**
- [ ] This concern is of secondaryimportance and may be addressed at the caseworker's discretion.
- [ ] This concern requiresaresponse that would have to be successfully implemented before the case could be closed.
7. How strongly do you agree or disagree that this case should be referred for assessment and intervention planning by an organization qualified to address this concern?

- Agree strongly
- Agree
- Disagree
- Disagree strongly

8. How likely would there be full cooperation by the relevant family member(s) in addressing this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely

9. How likely would there be a substantial benefit from services intended to address this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely
The family composition consists of a 42 year old mother (Aubrey), an 11 year old boy (Josh) and a 10 year old girl (Evelyn). The father of the 11 year old is James; however, the father of the 10 year old is unknown.

The family’s involvement with the Agency occurred when it was reported the mother comes home every day and “whoops” her children with a switch and a belt on their legs and back. She also burns their fingers. The 11 year old is reported to have scars on the back of his legs and circular injuries on his arm from the beatings. The mother does not allow the children to eat anything in the house while she is away.

The mother indicated the family has been under stress this past year due to finances and behavioral issues of her son. Since the mother has been employed her finances have become less of an issue. Prior to her current employment they had been homeless.

The mother expects her children to do chores and denies addressing her children in negative tones or deems them. She uses physical discipline (whipping children on the butts with belts) but she also has them write lines and study a Bible character and write an essay as one form of discipline. She had a surveillance camera installed in her home to ensure their safety. The camera streams directly to her phone.

The father of the 11 year old, the mother reported, has not been a source of support but he has made attempts to see his son. Aubrey does not want him around because he filed a domestic violence report against her for throwing bottles and pieces of a broken mirror at him.

The 11 year old is going into the 7th grade and has a history of being suspended from school due to cursing, being loud and disruptive in class and not doing his work. He takes medication for his ADHD. The mother reported that when he takes his medication his behavior improves. However, over the past year the mother indicated his behavior has gotten worse and he has destroyed property in the house, fights with his sister, and has stolen money from her.

The 10 year old is able to self-protect. She is going into the 5th grade and does not have any cognitive, physical, or developmental delays. She indicated that she has been punished by her mother (whooped with a belt and switch). She stated her fingers were burned when she and her brother had been cooking when her mother was at work. She is expected to clean her room and the kitchen. She tends to fight with her brother a lot and has recently started to run away from home.

**Concern: Domestic Violence (Adult)**

10. Which of the following statements best represents your view regarding this concern?

- This concern **doesnotrequirearesponse** at this time. **SKIP TO NEXT CONCERN.**

- This concern **mayrequirearesponseinthefuture**; the case should not be closed until further assessment allows the caseworker greater insight into the issue. **SKIP TO NEXT CONCERN.**

- This concern is important but **wouldbeaddressedifthecaseworkersuccessfullymanagedalloftheotherconcerns**, identified in this case. **SKIP TO NEXT CONCERN.**

Case 27

The family composition consists of a 25 year old mother (Eli), a 4 year old boy (Owen) and a 1 year old girl (Mia). The father of the children (Max) does not live with the mother or his children.

The family’s involvement with the Agency occurred when it was reported the children were home alone. The police responded to the report. After entering the home and waiting 30 minutes they placed the children in the cruiser and took them to the Agency. In the process of placing the children in the cruiser the mother walked in and stated she was at the store, but could not say which store. She did not have any bags with her. When the police entered the home, they reported there was no food in the home, no diapers, very little clothing, and no toys. The children were watching TV at the time they entered the home. The mother was arrested on two counts of child endangering and is currently in jail. The mother indicated she was homeless and was “staying over” in her children’s father’s apartment.

When speaking to the mother she indicated the morning she left her children alone she had chained the front door and went out the back door. She went to do laundry and then went to the Dollar Store. When she discovered she did not have her debit card she returned to the house. She did not want to wake her children and thought they would be alright when she went to do laundry and go to the store. The children’s father was not aware of the mother ever leaving the children alone.

The Agency placed the children with their father. Prior to placement he spent considerable time with the children, including taking them to the park and going to Magic Mountain. He is employed and has the support of friends and family to assist with supervising the children. The father has gotten a bed for the children and can obtain clothing for the children.

The 1 year old is pre-verbal; however she recognizes simple instructions given to her. She can assist in putting her clothes on and identify objects. The 4 year old has limited verbal skills. Both children appear to be on target for their age.

The agency became involved with this family when it was reported the child to be frequently playing the roof of the house. Upon investigation, it was learned that the child also had a bruise, approximately 2 inches in diameter, on his thigh. When the child was asked what happened, the child quickly said that his mother hit him with a belt. The child has been diagnosed as having ADHD and prescribed Ritalin, however the mother does not give it to him regularly. She does not like giving her son medication.

The mother, six months pregnant, states she is physically exhausted, low on energy and is depressed, and finds it difficult to parent a very active child. The father works extremely long hours at a bank, and is out of town 2 to 3 days a week, and is not often home.

The family composition consists of a 33-year old mother (Leah), the mother’s 34-year old boyfriend (Les) and a 12-year old girl (Sophie).

The agency became involved with this family when it was reported the mother of 12 year old Sophie and her boyfriend subjected Sophie to extreme sexual abuse over a six month time period. Following a lengthy trial and sentencing of the boyfriend and mother to prison, the mother and boyfriend are not permitted to have any contact with Sophie.

The impact of the abuse on Sophie now exhibits itself with visual and auditory hallucinations, obsessions with popular cartoon characters who serve to “keep me safe”, and she does not wish to bathe. The Agency placed the youth with her father (Tim) and his wife (Emily), who are emotionally and physically supportive of her. The father is employed; however, his wife (Emily) was in an automobile accident and is recovering from shoulder surgery. The father struggles to comprehend what his daughter endured from her mother and boyfriend and becomes angry, depressed, and worried about his daughter’s future.

**Concern: Physical Illness (Adult)**

The family composition consists of a 32-year old mother (Caroline), a 12-year old girl (Natalie), a 10-year old girl (Rosalie) and a 9-year old girl (Lydia).

This family came to the attention of the Agency when it was reported the 12-year old was “staying up all night to babysit her 7-year old cousin” “while the cousin’s mother was away”. The cousin’s mother gets home from work at 2 am, and Natalie’s mother picks her up when it is time for her to get ready and go to school. Natalie’s mother was unaware that Natalie was ingup all night long.

Natalie has significant behavior problems at school. Natalie has ADHD and is oppositional defiant. She takes Concerta and Ritalin. She has no physical health concerns. Although she is very bright, she does poorly because she does not complete her work. Natalie states she is too tired from staying up all night and can’t do her homework. She has had multiple suspensions for being disrespectful towards staff (threatened to shoot a teacher if she had a gun, told the principal she was going to hit him) and destructive (writing on desk with markers, threw the teacher’s book in the garbage). She is out of control when she is not on her medication.

Natalie is excited about caring for her cousin and has done well with this task. Rather than caring for her cousin in her cousin’s house, she will do it in her home while her mother is present. Natalie’s mother reports that Natalie’s disruptive behaviors decrease as the level of her involvement in other's lives increases. With her mother’s support, Natalie will babysit her cousin at her mother’s house only when her mother is there.

The 10-year old (Rosalie) has excellent cognitive and social skills. She has a number of outside friends and loves outdoor activities.

The 9-year old (Lydia) is most interested in outdoor events. She is not interested in television and prefers the company of friends and family. Lydia exhibits strong intellectual skills and interacts well with outsiders as well as with her siblings. She has no assessed or suspected emotional or behavioral impairments.

The girls’ mother is able to discuss her children’s different personalities, and tailor her responses to her children’s actions in a child-specific manner. The mother evidences strong cognitive skills and communicates her thoughts to others with reflection. She arranges for sufficient income-flow into her family in order to meet her children’s needs and becomes directly involved in extra-familial contacts in order to address any safety concerns of potential friends of her daughters.

Caroline exhibits appropriate emotional control in order to engage in beneficial communication with her daughters. Caroline has no physical health concerns. She evidences no emotional/behavioral deficits and is actually quite able to engage others in attempts to strengthen their own protective skills. Caroline has no documented or otherwise suspected domestic violence history. There is no evidence or otherwise received reports of illicit substances for this family. Caroline’s discussion of stress reduction methods and parenting practices was presented in a winsome and persuasive manner.

**Concern: Emotional Behavioral (Child)**

The agency has Ella in custody and she is placed in a foster home. At visits with her father, it was reported that he punches her in the legs and ribs, and speaks to her very insultingly. When custody is terminated, Ella is afraid of going home with her father and is threatening to run away.

Ella’s mother has a severe physical illness with depression and Ella wanted to check on her during the visit. Her father would not let her and took her phone away.

Ella has been diagnosed with ADHD and has a learning disability, and a hearing impairment. Last year, she was sexual abused by another 13 year old with whom she went to school.

Ella’s mother is unable to work and receives SSI, food stamps and medical coverage. Because of Ella’s father having an extensive history with domestic violence and substance abuse, she does not want Ella around him.

**Concern: Emotional Illness (Adult)**

Case 33

The family composition consists of Natalie, a 32 year old mother, Christian, age 32, the father of her two children, Natalie’s 7 year old son (Ben) and her 4 year old son (Jack).

The family’s current involvement with the Agency occurred when it was reported the 7 year old was “filthy”, had holes in his clothes and scabs all over his body from bed bugs. Additionally, there were concerns that both parents used drugs and the mother was found “passed” out with a needle in her arm and a line of cocaine beside her.

The family is currently living with relatives because their home is infested with bed bugs. The mother took her son to the doctor when several bites were seen. The family has tried to get rid of the bed bugs by bombing and has thrown away their furniture.

The mother denies currently using drugs; however it was revealed that when she was in pain recently she took her husband’s pain medication. She also stated she uses marijuana periodically (last month) but not around her children. Cocaine and marijuana were identified as her substance of use. The mother had previously been in rehab and reported she has been “clean” ever since. The children’s father has a history of substance abuse and a criminal record involving possession of drugs which was identified through a criminal record check. The Agency has not been able to locate the father to conduct an interview with him.

The 7 year old currently attends school. His teacher reports he has a lot of separation anxiety, and is behind academically. The 4 year old is very verbal and does not appear to have any cognitive or physical delays.

**Concern: Housing Issues**

Case 34

This family came to the attention of the agency by a family friend who read the mother’s Facebook page which stated she smokes marijuana and takes Percocet. The family friend is worried that the children are not being fed and looked after.

When the caseworker interviewed Ella, she denied drug use and has reported that she would be willing to do a drug screen. The family lives with Ella’s mother, Isabella. With Isabella playing a major role in raising her grandchildren, the children appear to be well taken care of and adjusted. Lillian and Claire are friendly and talkative, although Lillian is quiet and shy when she was first approached. The children are clean, and ample food is in the house, and an abundance of toys and age appropriate books.

Lillian and Claire have access daily to mandated reporters through school and their pediatrician. Those individuals see no concerns with the children’s health and well-being. The children have had all of their immunizations.

Mother reports that she was in abusive relationship with the children’s father, Dan. She said that Dan was charged with domestic violence and she has a PSO against him. He has not been around since she obtained the court order.

**Concern: Substance Abuse (Adult)**

The family consists of the mother, 35-year-old Madison, and her two children: Emma, age 16, and Jacob, age 12.

The agency became involved with the family when a hospital’s psychiatric social worker reported that Madison would be discharged the following day from a psychiatric unit. She is diagnosed with PTSD and Bipolar Disorder. Madison has a history of having auditory hallucinations, which tell her to kill her children and herself. Madison denies having these hallucinations now, and hospital staff have not observed any psychotic symptoms in the last few weeks. The psychiatric social worker states Madison’s medications are effective at controlling the hallucinations, anxiety, and depression.

The caseworker did not observe Madison to have any cognitive disabilities, and she understood concerns presented to her and she was able to relay information back to caseworker that was understandable and appropriate. Madison denied any significant physical health issues, although she is receiving outpatient mental health care. She is on a variety of psychotropic medications.

Madison reported she also has a home based mental health counselor visiting her twice a week and she has a case manager through the local mental health agency.

Madison denied any current domestic violence in the home, but has been a victim of domestic violence with her former partner, as well as the children's father. Neither her former partner nor her former husband live in the home. Neither person is involved with Madison or the children.

Madison denies the use of non-prescribed drugs and alcohol, and the caseworker did not observe any signs of such in the home. When Madison is anxious, she has to tendency to “go off” on her children, expecting too much from them and is highly critical. She is aware of these reactions, and takes responsibility for them. She is working on becoming more self-aware of her anxiety in order to thwart her negative statements toward her children.

Emma is 16 years old, average height and weight for her age. She is able to protect herself based on her age and her ability to report abuse or neglect, and due to the fact that she would be able to safely flee from harmful situations should one present itself. At this time, there are no medical problems and she is not currently prescribed any medications. She is going to be a junior at her local high school. Emma stated she is on the track team and she loves school. She stated she was aware that her mother wanted to hurt herself, but stated since her mother received the right help she has no concerns. Emma was able to report to worker that if something did happen with her mother, Emma was able to call the appropriate individuals. Madison denied Emma has any behavioral or emotional issues. Emmawas very polite and respectful with the caseworker.

Jacob is 12 years old, 7th grader at his local junior high school, average height and weight for his age. Though Jacob is old enough to report abuse or neglect, he may not be able to recognize an abusive situation and safely remove himself. Caseworker observed Jacob to be very shy. He spoke with caseworker only briefly and would not leave his mother's side. Madison did report Jacob is diagnosed with ADHD and is currently on medication for it. Madison stated Jacob does not have an IEP and does well in school. Madison denied Jacob has any significant behavioral or emotional issues. Jacob did not appear to be frightened of his mother. He was observed to be comfortable and happy in the home.

Caseworker observed that the family has positive interactions. All of the children had age appropriate expectations and chores. The family lives in a three bedroom home, which is clean and well maintained. All of the utilities are on and in good working order. Madison rece

The family consists of Clara (51 years old), who is the non-custodial mother to 17-year-old Mason; Clara’s brother and Mason’s uncle is 54 year old Steve. At the time of the call, Steve had temporary custody (private) of Mason.

The agency became involved with this family when 17-year-old Mason called the agency for help. Because his mother was unable to raise him, his uncle obtained legal custody of him 8 months ago without Agency involvement. Mason states his uncle kicked him out of the house, and he has no place to go. Mason is in the 9th grade and has an IEP.

Mason’s mother would like to care for him but her own physical health problems, stemming from the lasting effects of an automobile accident, prevent her from being able to provide Mason with the skilled guidance he needs. Clara states Mason becomes easily frustrated when his needs and wishes are not immediately satisfied. He subsequently becomes anxious, reasoning skills become restricted, and then he becomes very impulsive. On these occasions, he has smashed windows, thrown rocks at parked automobiles. He has no history of becoming physically violent toward others. On several occasions, the police have been called to deescalate the situation. Because of his demands on others and lack of insight and emotional control, he becomes socially isolated and depressed.

Steve states that he does not have the patience or skill set to deal the Mason’s erratic behavior. He states when Mason “blows”, he has been called away from work to deal with Mason. His employer is not sympathetic to Steve having to leave work spontaneously. Since no family members were able to assist Mason, the agency obtained custody of him and placed him in a special needs foster home. It is expected the custody will continue until is 18 years old.

Thank you for completing this survey
TAB 5 GOES HERE

Discipline Expert Survey #1
Welcome

Thank you for agreeing to assist the Ohio Department of Job and Family Services in identifying the best evidence-based practices that are needed in children’s services cases.

The survey requires you to read short summaries, or vignettes, of cases. These vignettes represent real cases in Ohio. As such, they vary in complexity and likely responsiveness of the family members to interventions. The arbitrary case numbers you’ll see may not be consecutive.

Associated with each vignette are anywhere from 1 to 18 concerns that were identified by the children’s services caseworker. For some of these, you may not believe yourself to have the disciplinary expertise or scope of practice needed to make a service recommendation. For others, you may believe that too little is known to make a service recommendation. But when you feel comfortable making a recommendation, you will be asked to indicate which of several evidence-based interventions you believe would be suitable for the case under consideration.

The following are instructions you are requested to follow

- Before beginning to evaluate the cases, you will be asked a few questions about your professional education, and experience.
- You will be asked to provide recommendations for services. These vignettes should be read as if the case is at the point where services are being planned. It will sometimes be challenging, based on the information provided, to know what to recommend.
- In making your recommendations, please assume that each case is being managed by a competent, well-supervised children’s services worker who meets professional standards in terms of his or her ability to engage and assess families, plan and coordinate services, evaluate progress, and deal with diversity issues. You should assume the caseworker is a service coordinator, though, and not a service provider.
- You will be asked to recommend specific interventions. These are interventions that ODJFS has identified as potentially relevant to some children’s services cases. It would be highly unusual if you were familiar with all of these interventions, or perhaps even most of them. Please do not be concerned about interventions with which you are unfamiliar; simply focus on selecting interventions from among those with which you are familiar. Recommendations need not be based on actual accessibility or availability of the intervention in your local community, rather focus on selecting intervention that would be appropriate to the case.

We acknowledge that some of the judgments you are being asked to make are challenging. If you believe that a judgment is simply not possible given the available information, you may choose to leave that question blank.

The results of this study will be used to improve children’s services in Ohio. ODJFS will see only aggregate responses across all of the experts being surveyed. Your responses will be kept strictly confidential.

Given that only professional judgments are being solicited, that the goal of the research is system improvement, and that your responses will not be attributable to you, this research has not been submitted to an Institutional Review Board for review.

This material has been prepared using public money and is subject to ownership by the State of Ohio. Any use or reproduction of the material needs to be approved by the State of Ohio.

We are grateful for your time completing this survey as it will help to improve services. Thank you.

Click "Next" to indicate that you are willing to proceed.
Your Qualifications

Following are a few questions about you and your qualifications

1. Name (your contributions will be noted in the acknowledgments section of the final report if you provide your name here, but nobody except the research team will be able to associate your responses to your email address)

2. Highest Degree

8. Other Areas of Expertise

- Developmental Disabilities, including Autism Spectrum Disorder
- Teen Pregnancy and Parenting
- Domestic Violence
- Parenting and Family Systems
- Deaf/Hard of Hearing, Speech/Language, and/or Visual Impairment
- Medical/Physical Health
The family consists of the mother and father (Alicia age 42 and Kevin age 43) and their 14 year old son, Ethan.

The father called the agency asking for assistance. He was just released from jail after completing his two week sentence for domestic violence. He stated while he was in jail, his wife (Alicia), and Ethan were drinking and smoking marijuana. Kevin stated that Alicia is divorcing him, and he is not living with them.

Alicia, the mother to Ethan, does not report cognitive delays, physical or emotional problems. She reports that she was divorcing Kevin because of domestic abuse. She stated that 15 years ago her then boyfriend would hit her when he was intoxicated, and she has no tolerance for such abusive individuals. Leaving Kevin, she stated, is a huge positive. She stated that he constantly brought the family down and failed to contribute to the family’s well-being. She stated she does not drink alcohol, but smokes marijuana. She stated she does not smoke marijuana around Ethan.

Alicia and Ethan were observed to interact very well with one another. They talked to one another, appeared to be comfortable in each other’s presence, and made ample amount of eye contact.

Alicia and Ethan have safe and stable housing, as Alicia works full-time. A major support system is Alicia’s parents.

**Concern: Domestic Violence (Adult)**

9. Which of the following statements would you most strongly agree with?

- [ ] I do not have expertise in regard to this concern. **SKIP TO NEXT CONCERN.**

- [ ] While I possess relevant expertise, I do not believe enough is known about this family at this time in order to recommend services. **SKIP TO NEXT CONCERN.**

- [ ] I am comfortable making service recommendations at this time, with the understanding that my recommendations are based only on those few salient features of the case as presented above.

10. Assuming the following interventions were available to the family, please check each of those that you believe could be of benefit to the family. You may check any number of interventions.

- Community Advocacy Project
- Family Thriving Program
- Prevention and Relationship Enhancement Program
- Prolonged Exposure Therapy for PTSD for Adults
- Seeking Safety for Adults
- Healthy Families America
- Narrative Exposure Therapy
11. In the space below, please write in the names of any evidence-based interventions that might benefit this family in regard to this concern but that were not included in the above list.

12. How likely would there be a substantial benefit from services intended to address this concern?
   - Very likely

- Very unlikely

23. Are there any other comments you would like to make about this case?

The family composition consists of a 38 year old mother (Emma), a 32 year old father (Mason) and three children: 9 year old daughter (Sophia), 7-year old daughter (Isabella), and their 6-year old son (Michael).

The family’s involvement with the agency began when it was reported the 7 year old child (Isabella) had been sexually assaulted by her 16 year old cousin while she was spending the night in a family member’s home. A family member contacted the child’s mother to report the incident. Isabella was taken by her mother to obtain a physical exam where it was indicated there was a laceration in the perianal region. She attends Kindergarten and is doing well academically and gets along with her peers. Her well care and shots are up-to-date.

The 6 year old (Michael) attends preschool and has an IEP to address behavioral concerns. The mother indicated he struggles with his behavior in the home and at school. He has sensory issues and reactive temperament.

The 9-year-old (Sophia) is in the 2nd grade where she has no academic problems and gets along with her peers. There is no reported emotional behavioral concerns. Vaccinations are up-to-date.

The mother graduated from high school and attended some college. She does not have any reported physical or medical concerns and no issues of domestic violence or substance abuse are noted. She is the primary disciplinarian and uses praise, redirection, time-outs and limited spanking. The father dropped out of high school in the 9th grade. He denies having academic difficulties or any medical or physical conditions. He indicated that he rarely drinks, and when he does not continue to intoxication. The mother does not drink. He allows his wife to discipline their children. Both parents appeared very nurturing. Both parents work and have a support system. The father had a traumatic childhood of abuse and neglect and alcoholic mother. The sexual abuse of his daughter seems to be triggering anxiety related to his past traumas. Review of agency records indicated the father has an indicated report of sexual abuse against his stepdaughter, who is living with his ex-wife, and was sexually abused by his older sister.

**Concern: Sexual Abuse (Child)**

24. Which of the following statements would you most strongly agree with?

- I do not have expertise in regard to this concern. **SKIP TO NEXT CONCERN.**

- While I possess relevant expertise, I do not believe enough is known about this family at this time in order to recommend services. **SKIP TO NEXT CONCERN.**

- I am comfortable making service recommendations at this time, with the understanding that my recommendations are based only on those few salient features of the case as presented above.
25. Assuming the following interventions were available to the family, please check each of those that you believe could be of benefit to the family. You may check any number of interventions.

☐ Trauma-Focused Cognitive Behavioral Therapy
☐ Multisystemic Therapy for Child Abuse and Neglect
☐ Children with Problematic Sexual Behavior - Cognitive Behavior Therapy
☐ Trauma Systems Therapy
☐ Trauma Affect Regulation
☐ Prolonged Exposure Therapy for Adolescents
☐ Cognitive Processing Therapy
☐ Narrative Exposure Therapy
☐ Cognitive Behavioral Intervention for Treatment in Schools
☐ Child and Family Traumatic Stress Intervention

26. In the space below, please write in the names of any evidence-based interventions that might benefit this family in regard to this concern but that were not included in the above list.

27. How likely would there be a substantial benefit from services intended to address this concern?

☐ Very likely
☐ Somewhat likely
☐ Somewhat unlikely
☐ Very unlikely

28. Are there any other comments you would like to make about this case?

43. Are there any other comments you would like to make about this case?
The family composition consists of a 30-year-old single mother (Sarah) and her two children: 13-year-old son (Lucas) and 8-year-old son (David).

The Agency became involved with the family when a neighbor reported the mother was selling her food stamps to support her drug habit. The neighbor said the mother uses crack and heroin, and her sons are going around the apartment complex telling their neighbors that their mother has cancer. The sons beg neighbors for food and money. Both children have stolen items from the neighbors. Additionally, the children are sometimes locked out of their home for hours.

The mother became pregnant while in high school, and did not finish. She does not use physical discipline with her sons, and does not pay a lot attention to them while she is engaging in substance abuse. She is in remission from ovarian cancer and her family helped her out with the boys while she was in treatment. The mother denied using any drugs; however her drug screen came back positive for her prescriptions (opiates-hydrocodone) and marijuana. Following the results of the drug screen she said she did not use marijuana around her children. The mother has a hard time financially and has attempted to find employment. She receives cash assistance and help with her housing.

The 13-year-old does not have any known developmental delays, but is very concerned about his mother’s health and worries the cancer will return. He is doing well in school, but does not interact well with his peers, who tend to bully him. The 8-year-old has no reported delays and is doing well in school and is active in sports.

Case 5

The family consists of a 38-year-old mother (Jessica) and two children: 15-year-old Courtney and 13-year-old Adam.

The agency became involved with the family after it received a phone call from the school nurse. Courtney stated she got into an argument with her mother the night before, because her brother took her charger. It escalated into a physical altercation. Although Courtney said her mother hit her in the face and fell on her knee, causing it to swell, the school nurse said there is no visible injury or physical impairment.

When the caseworker spoke with her, Courtney said she was yelling at her brother for taking her charger, and her mother came into her room. Courtney stated her mother grabbed her by her hair and hit her several times in the face. The caseworker asked her if it was an open or closed fist and Courtney could not recall. Courtney stated that she grabbed her mother’s hands to make her stop. When she did this, Jessica’s boyfriend entered the room to break up the fight. When he pulled Jessica off Courtney, Jessica reportedly fell onto Courtney and onto her knee.

Courtney is currently on an IEP for ED. The school nurse said that Courtney has trouble with relationships and is often involved in dramatic situations. She escalates a situation to the point where someone has to react. Courtney is currently in the 10th grade, and is failing two classes. She has a history of running away and staying at the juvenile detention center.

Upon interview, Courtney has plans of being independent, but until she can she wants to live with her aunt because “she’s old and smells nice”. She is aware she doesn’t have “people skills”, and her remedy is to go to school online so she wouldn’t have to interact with people. To earn a living she would be a writer and write books. Courtney also reported that she would not be able to talk with the caseworker past 12:00 because that is when she “runs the streets”. The caseworker asked what she meant, to which she responded, “I just walk around”. Courtney also reported having some friends that she hangs out with but would not elaborate with any names or what she likes to do with her friends.

Adam is very personable, a student athlete, and makes mostly A's and B's. He is not on an IEP. The school nurse said he avoids trouble and conflict, and is a “great kid”. Adam reported that things are very tense when Courtney is in the home: "She tends to try everything she can to get my mom mad”.

Jessica has no cognitive, physical, emotional, or mental delays that would keep her from providing for the basic needs of her children. Jessica owns several successful businesses. Jessica reports no history with substance abuse and appears to have appropriate parenting practices.

Jessica reports that she does currently have a boyfriend but he does not live in the home. “I am too busy taking care of this house and my businesses to commit to something like that.” Jessica appears to have a great support system.

**Concern: Emotional Behavioral (Child)**

Case 6

The family composition consists of a 31-year-old mother (Amelia), a 35-year old father (Noah), and their daughter, an 11-year old Ava. The parents are divorced, and Amelia’s boyfriend is 28-year-old Ben.

The Agency became involved with the family when it was reported that the 11-year old girl was visiting her mother (Amelia) and the mother’s boyfriend (Ben) came out of the bedroom and slid his hand up her thigh, to her vaginal area and her butt, groping her. There is a reported history of the mother’s boyfriend inappropriately touching the 11-year old, but she did not report this to her mother until recently when this incident occurred over the weekend. The boyfriend has an extensive criminal history and he may be a suspect in another sexual assault, possibly out of state.

The 11 year old girl’s parents have a strained relationship and this has created problems for the child. The child states she really misses and worries about her mother, and never stops thinking about her. The 11-year old has continued to express that she would prefer to live with her mother. The child appears to be depressed. She is currently living with her father, who has custody of her. Custody was awarded to the father because the mother did not use appropriate judgment in the care of her children. The child’s mother had an extensive drug history (Meth) and the child had taken over the role of caregiver to her mother.

The 11-year old girl's father indicated he used marijuana in the past, but not within the last two months.

103. Are there any other comments you would like to make about this case?

The family composition consists of a 21-year-old mother (Violet) and her 2-year old daughter (Audrey).

The agency became involved with the family when it was reported the mother was seen using heroin inside a car. The 2-year old girl was in the back seat of the car. The mother then proceeded to lose consciousness and began to throw up in the car. During the course of the assessment/investigation the mother was arrested and charged with drug possession and abuse.

At the time the child was born, her mother tested positive for THC. The baby did not have a positive screen. The mother has had substance abuse problems since age 16. She uses drugs to cope with the problems in her life. She became pregnant at age 16 and gave her child up for adoption. Due to the mother’s drug addiction, she is unable to protect her 2-year old. Violet states she is tired and sad. Observations of the interactions between the mother and child indicate the mother has not bonded and is “just going through the motions.”

Case 8

The family composition consists of a 20-year-old mother (Layla) and her 2-year-old daughter (Lucy). They are currently residing with the child's maternal grandmother (36-year-old Elizabeth).

The agency became involved with the family when it was reported that Layla was abusing drugs (specifically marijuana) and that she brings her children around others who are using drugs.

Layla recently left an abusive relationship after being punched in the eye; however she downplays the violence. Layla reports feeling stressed, overwhelmed, and angry at times. The grandmother, Elizabeth, reported Layla has learning disabilities and agrees that Layla is angry a lot and does not respond well to stress. The original report included drug involvement by Layla, but the results of her drugs tests were negative.

It was reported that Layla is always grabbing and yelling at her daughter whenever she does something that she does not like. Layla currently does not have any resources to take care of herself and her child. She is reliant on her mother for help.

The 2-year old has some breathing issues and uses a breathing machine and albuterol drops for the machine to use as needed.

**Concern: Substance Abuse (Adult)**

166. Are there any other comments you would like to make about this case?
The family composition consists of a 50 year old mother (Audrey), a 50 year old father (Logan), a 17-year old boy (Andrew), a 16-year old girl (Natalie) and a 15-year old girl (Samantha).

The Agency became involved with the family when it was reported the mother (Audrey) and father (Logan) have a long history of substance abuse. The father is verbally abuse to the girls calling them “whore and bitch”. The oldest girl has truancy problems and has recently been caught smoking marijuana. The mother has breast cancer and is taking chemotherapy.

While all members live in the same household it was noted the mother and girls stay together while the father and son stay together. Both parents want to separate but are unable to do so because of their finances. The parents will argue in front of their children and the children have selected the parent who they “side” with. When the mother is working, the girls will not go home. Instead, they will go to their friend’s house, because they do not want to be around their father or brother.

The father is verbally abusive and physically assultive to his 15-year old daughter. The 15-year will “argue” with the father when he is verbally or physically abusive. She recently tried to take her mother’s sleeping pills and was rushed to the Emergency room. She has previously done this. She currently takes Lexapro and Desyrel. She suffers from anxiety, depression, suicidal ideations and cutting. The 16 year old has not coped well with her father’s abusive behavior and her parent’s continuous fights; however, she has been seen for mental health issues (anxiety, depression) and has cut on herself. The 17-year old boy follows his father’s lead and is also verbally abusive toward his sisters. The father is also verbally abusive to the mother.

The father has been diagnosed with bipolar disorder but refuses to go to treatment. The father denies having a substance abuse problem (e.g., marijuana). The father is unable to hold down a job, although he tries to get odd jobs to pay the bills. The mother primarily supports the family and the family receives medical cards for the children and food stamps.

The mother is on anxiety/depression medication due to the stress in the home. She denies having a substance abuse problem (e.g., marijuana). The mother is presently undergoing chemotherapy.

Due to issues that have been occurring in the family all three children have missed a lot of school.

[ ]
The family composition consists of a 33-year old mother (Ava), a 10-year old girl (Kris), an 8-year old girl (Vivian), a 5-year old girl (Abby) and a 4-year old boy (Wyatt).

The Agency has a lengthy history of involvement with this family. The children’s father had been very abusive to Ava. The father has had no contact with the family in the past year.

The mother is extremely depressed, anxious, and has a history of overusing her anti-anxiety medication. It is difficult for her to plan and she get caught up in things she cannot control (e.g., her neighbor’s problems, sister’s problems), making it difficult for her to plan her own life. Rather than dealing with her issues directly, she procrastinates without realizing how self-defeating it is, which often intensifies her financial burdens. Her emotional and cognitive problems impact her parenting skills.

Recently it was reported the 8-year old child was making sexually inappropriate statements, transmitted in a note, to a classmate. The classmate stated all she did was receive the note from her classmate and there had been no sexual contact. The 8-year old admitted to sending the note. Additionally, it was mentioned that the neighbor’s grandson touched her in her “privates”. The 8-year old and her 10-year old sister had been sexually abused while in foster care but they did not report it right away.

The 8-year old had been prescribed Focalin for her ADHD symptoms. The mother indicated the medication caused her daughter to begin wetting herself, which led to a lot of emotional distress. The mother reported her physician stated she should wean her daughter off the medication and then have her re-evaluated.

Thank you for completing this survey
TAB 6 GOES HERE

Discipline Expert Survey #2
Thank you for agreeing to assist the Ohio Department of Job and Family Services in identifying the best evidence-based practices that are needed in children's services cases.

The survey requires you to read short summaries, or vignettes, of cases. These vignettes represent real cases in Ohio. As such, they vary in complexity and likely responsiveness of the family members to interventions. The arbitrary case numbers you'll see may not be consecutive.

Associated with each vignette are anywhere from 1 to 18 concerns that were identified by the children's services caseworker. For some of these, you may not believe yourself to have the disciplinary expertise or scope of practice needed to make a service recommendation. For others, you may believe that too little is known to make a service recommendation. But when you feel comfortable making a recommendation, you will be asked to indicate which of several evidence-based interventions you believe would be suitable for the case under consideration.

The following are instructions you are requested to follow

- Before beginning to evaluate the cases, you will be asked a few questions about your professional education, and experience.

- You will be asked to provide recommendations for services. These vignettes should be read as if the case is at the point where services are being planned. It will sometimes be challenging, based on the information provided, to know what to recommend.

- In making your recommendations, please assume that each case is being managed by a competent, well-supervised children's services worker who meets professional standards in terms of his or her ability to engage and assess families, plan and coordinate services, evaluate progress, and deal with diversity issues. You should assume the caseworker is a service coordinator, though, and not a service provider.

- You will be asked to recommend specific interventions. These are interventions that ODJFS has identified as potentially relevant to some children's services cases. It would be highly unusual if you were familiar with all of these interventions, or perhaps even most of them. Please do not be concerned about interventions with which you are unfamiliar; simply focus on selecting interventions from among those with which you are familiar. Recommendations need not be based on actual accessibility or availability of the intervention in your local community, rather focus on selecting intervention that would be appropriate to the case.

We acknowledge that some of the judgments you are being asked to make are challenging. If you believe that a judgment is simply not possible given the available information, you may choose to leave that question blank.

The results of this study will be used to improve children's services in Ohio. ODJFS will see only aggregate responses across all of the experts being surveyed. Your responses will be kept strictly confidential.

Given that only professional judgments are being solicited, that the goal of the research is system improvement, and that your responses will not be attributable to you, this research has not been submitted to an Institutional Review Board for review.

This material has been prepared using public money and is subject to ownership by the State of Ohio. Any use or reproduction of the material needs to be approved by the State of Ohio.

We are grateful for your time completing this survey as it will help to improve services. Thank you.

Click "Next" to indicate that you are willing to proceed.
Following are a few questions about you and your qualifications

1. Name and address (Your contributions will be noted in the acknowledgments section of the final report if you provide your name here, but nobody except the research team will be able to associate your response to your email address).

☐ Parenting and Family Systems  
☐ Deaf/Hard of Hearing, Speech/Language, and/or Visual Impairment  
☐ Medical/Physical Health
The family consists of 22-year-old Emily, and 5-year-old Ethan. Ethan’s father is 25-year-old Alex. Alex lives with his mother, 48-year-old Lily. Ava, who is 47 years old, is Emily’s mother.

Emily and Ethan, recently moved into her mother’s home, and Emily has left Ethan in her mother’s care. Ava has an open case with the agency. She is diagnosed with Paranoid schizophrenia and refuses to remain on medication. She is prone to violent outbursts, and has an extensive criminal history. She also uses crack, cocaine, marijuana. Because she is not compliant with her medication, her two children are in the agency’s custody.

Ethan is a 5-year-old male with no reported delays or issues. He was able to hold a clear conversation with the caseworker. He is not enrolled in school or daycare, but was able to spell his name for the caseworker. He told the social worker that his grandmother (Ava) speaks of evil spirits. Two days before the agency became involved with Emily and Ethan, Ava stabbed her boyfriend. Ethan witnessed the attack.

Emily has no reported cognitive issues, but does speak slowly. She understands the risk of putting Ethan in the care of her mother, but she states she has to live with her mother because she doesn’t have any other place to live. She reported that she completed the 11th grade. Emily was accidentally shot several years ago and she has some back pain and limps because of the injuries. She denied any mental health issues, but feels a lot of stress coping with her mother, trying to raise her son, and coping with her gunshot injury. She denies abuse substances, but others have said she smokes marijuana.

Emily’s former boyfriend and Ethan’s father, Alex, has cared for Ethan. Alex is living with his mother, Lily, who has also cared Ethan. Ethan reportedly does well there, and appears positively bonded to Alex and Lily. Alex is currently unemployed, but is looking for work.

Alex has no reported cognitive issues and spoke easily with the caseworker. He stated that he completed the 11th grade. He denied any mental or physical health issues for himself. He also denied any current or past domestic violence. He denies any current substance use. He stated that he walks away from the situation when he is stressed. He also denied having to use any discipline for Ethan.

**Concern: Emotional Illness (Adult)**

9. Which of the following statements would you most agree with?

- [ ] I do not have expertise in regard to this concern. **SKIP TO NEXT CONCERN.**

- [ ] While I possess relevant expertise, I do not believe enough is known about this family at this time in order to recommend services. **SKIP TO NEXT CONCERN.**

28. Are there any other comments you would like to make about this case?
An Emergency Department physician referred 7-year-old Emma to an orthopedic physician for a left hand fracture. The orthopedic physician called the agency.

Emma and her 12-year-old sister, Alice, were arguing, and their father, Levi, told them to stop. Emma started to walk away from him, and he grabbed her hand. She started to cry and said her hand hurt. The physician stated the bruising on Emma’s hand was “extreme” with dark greenish black bruising around the entire top part (palm down) of her left hand and the last two digits. Emma is diagnosed with a Type 2 fracture of the left metacarpal. Her hand was put in a cast which she will wear for two weeks. Additional x-rays will be done at that point to determine if she will require another cast. The physician is concerned about Emma’s poor hygiene. He noted that she was unkempt, wearing dirty clothing and smelled of perspiration.

Upon interviewing the parents, they appear to be in a very chaotic relationship, with little to no awareness how their faulty communication patterns impact their three children. They have no insights on why their children have oppositional behaviors. Both parents display a range of emotions, including anger, anxiety, frustration, distrust, and submission. On several occasions, according to Lily, Levi has hit her when he becomes angry and intoxicated, but always apologizes after he sobers up. Lily’s behavior swings from being impulsive and erratic to gentleness and concern.

Lily states that Alice has her own behavior problems. She acts very seductively to boys in the neighborhood. Seven years ago, Alice was sexually abused by a male cousin, who no longer has contact with the family. However, Lily states, he is in her nightmares, which she has a couple of times a month.

Although Lily and Levi are able to provide for their children’s physical needs, they do not understand that children need authority and discipline. Emily does not want to discipline them and prefers to pacify them. As such, Lily and Levi are disengaged, and uninvolved to the point of dismissing the children’s emotions and opinions. Although it does not appear that the parents use narcotics, their use of alcohol is almost daily.

**Concern: Sexual Abuse (Child)**

29. Which of the following statements would you most agree with?

- I do not have expertise in regard to this concern. **SKIP TO NEXT CONCERN.**

[ ]
The family composition consists of a 32 year old mother, a 10 year old girl, a 5-year old girl, and a 3-year old boy. The father of the two youngest children is in prison.

The Agency became involved with the family when it was reported the mother and her three children were homeless. The mother has no income, receives food stamps and a medical card.

The children do not seem to have any significant delays and appear to be adequately cared for. However, due to the instability of the mother's housing situation her older daughter has not been attending school on a regular basis and may be at risk of having social and developmental problems.

The mother does not appear to have any cognitive delays, substance abuse problems, but feels an enormous about of stress. She and her children had been living with friends and other family members while trying to locate housing. However, she has left her children with her friends/family and will not return to her children until the next day. The mother has not been able to obtain employment. The mother reports she has had unstable housing since the children's father was incarcerated for selling drugs and breaking and entering.”

**Concern: Maladaptive Response to Stressors (Parent)**

64. Which of the following statements would you most agree with?

- [ ] I do not have expertise in regard to this concern. **SKIP TO NEXT CONCERN.**
- [ ] While I possess relevant expertise, I do not believe enough is known about this family at this tie in order to recommend services. **SKIP TO NEXT CONCERN.**

The family composition consists of a 72 year old grandfather (William), a 63 year old grandmother (Grace), 44 year old mother (Natalie) of the children, who are Chris (14 years old) and Samuel (12 years old). All reside at grandparents’ home.

The family’s involvement with the agency occurred when it was reported that the 14 year old (Chris) and the 12 year old (Samuel) had been sleeping in a car outside of their grandparents’ home because their grandmother (Grace) stated they misbehaved and she did not want them in her home. The two youths have not been attending school. They were filthy and had not eaten. The children and their mother have been living with her parents for years and the grandmother has been taking care of her grandchildren with the older children looking after the younger children. It was reported the mother comes and goes.

Periodically, there is domestic violence between the grandmother and her daughter. The last argument concerned the grandmother wanting the daughter to obtain a job and secure her own housing for herself and children. The father of the children does not provide assistance to his family and the children have limited contact with him.

Children attend school and are doing well academically.

The mother indicates that she becomes depressed at having parenthood responsibilities as she has chronic back pain from an automobile accident. She responds to stress by fleeing and smoking marijuana. She has often left her children in the care of her mother. While living with her parents she does not help her mother care for the children.

Case 14

The family consists of parents Ryan (39 years old) and Rachel (37 years old), and four children: Cathy is 17 years old, Julie is 14 years old, Fred is 11 years old, and Nathan is 9 years old. The parents have been divorced for 7 years.

The agency became involved with this family when the police notified them that the children's mother was extremely depressed and threatening to kill herself in front of the children. The police took the mother to the emergency room for assessment and treatment.

The children's father stated that he divorced Rachel because of her fragile emotional state and her refusal to stay on medication. The court granted him full custody of the children with Rachel being permitted weekend visitation rights. Ryan states that when she is on her medication, she is very loving toward the children and would never harm herself or them. When she does not take the medication, she goes into irrational rages and threatens to harm herself and/or others.

The two oldest children are high performing in school and in music, and are very socially inclined. The two younger children also excel at school and are involved in sports.

The 11-year-old daughter’s mother states she was never able to establish a close and loving relationship with her. The child states she really misses and worries about her mother, and never stops thinking about her. The 11-year-old has continued to express that she would prefer to live with her mother. The child appears to be depressed. She is currently living with her father, who has custody of her. Custody was awarded to the father because the mother did not use appropriate judgment in the care of her children. The child’s mother had an extensive drug history (Meth) and the child had taken over the role of caregiver to her mother.

The 11-year-old girl's father indicated he used Marijuana in the past, but not within the last two months.

The family consists of the mother Hazel (32 years old), the stepfather Henry (41 years old), and Penelope, who is 12 years old. Jack is 35 years old, and divorced from Hazel. He has visitation rights with his daughter, Penelope.

The agency became involved with this family when it learned that the 12 year old, after visiting her mother and stepfather, returned to her father's home with a bruised arm, and head lice. She states the bruised arm was the result of being punched by her step-father. She states her mother uses heroin, and her stepfather is verbally cruel to her. In addition, Penelope states he has kicked her, hit her, and thrown her across the room. To support their drug habit, they steal from national stores. Henry was discharged from the military and has post-traumatic stress syndrome.

Penelope reported that Henry hits her mom in front of her. Penelope is frightened to go back to her mom's home.

```
The family consists of the parents Diane and Dave, ages 30 and 33 respectively, and four children: Zoe (9 years old), Parker (5 years old), Colton (7 years old), and Dillon (2 years old).

The agency became involved with this family when an emergency room nurse reported that Dillon was in the emergency room with a hematoma on his head. The parents said an older sibling tripped over him and caused the injury. As a precaution, a full skeletal x-ray was done and there were no pathological findings.

When the caseworker met with the parents, they said Dillon has Down's syndrome. They deny any domestic violence, substance abuse, or alcohol problems. They appear to be using good parenting skills and Dillon is involved with a variety of service providers and they are present several times a week. Current plan is to have him begin preschool when he turns three.

Zoe, Parker, and Colton attend their local public school, and are doing well. The schools report no behavior problems, and none were observed. Parents are using good parenting skills and stress doesn't affect the care of the children.

Good interaction was observed between all family members. They are able to make sure the children have their needs met. They are aware of agencies in the area that can help them if needed.

**Concern: Physical, Cognitive, and Social (Child)**

169. Which of the following statements would you most agree with?

- I do not have expertise in regard to this concern. **SKIP TO NEXT CONCERN.**

- While I possess relevant expertise, I do not believe enough is known about this family at this time in order to recommend services. **SKIP TO NEXT CONCERN.**

- Very unlikely

173. Are there any other comments you would like to make about this case?
The family consists of 27-year-old Paige and her 5-year-old son, Paul. Peter is her 29-year-old boyfriend.

The agency became involved with this family when it received a call from the police stating there was a child (age 5) who was left alone.

Paige, the 27 year old mother, stated that she has a substance abuse problem, which impacts her judgment and parenting skills. She has used several substances sporadically over the last 7 years, but she was clean for 5 of those.

She stated that when she was pregnant nearly 7 years ago, she was having a lot of back pain. Her physician prescribed Vicodin, and she became addicted. When she delivered her son, Paul, he tested positive for Vicodin. She states that Paul now seems hyper-vigilant and easily distracted. She worries it might be the result of the lasting effects of Vicodin addiction. After Paul was born, she entered treatment and was clean for nearly five years. Now, for the last six months, she has been using heroin and cocaine.

She obtains the drugs from her boyfriend, of eight months, who lives with her. Paige stated that her boyfriend, Peter, is a drug dealer. She would like to leave her boyfriend, but she is dependent on him for financial resources. She feels alone and isolated.

Paige stated that she has no past or current issues with domestic violence, but has a history of depression including thoughts of hurting herself. On several occasions, she has acted on those thoughts and has superficially cut her arms and legs. She has been prescribed medication to help her depression and anxiety; however, she does not take it because she does not like the side effects. She has no contact with family members, and her field of social supports is very limited.

Paul attends pre-school and makes friends easily. He is up to date on his vaccinations.

The family composition consists of a 51-year-old stepfather (Charles) and a 17-year-old pregnant teen (Cathy). Cathy’s mother is not involved in her care. Her whereabouts are unknown.

The Agency became involved with the family when it was reported that Charles hit the 17-yr-old (Cathy). Parties agree that the confrontation began with Cathy hitting Charles, and in response, Charles punched Cathy, causing a mark on her face. Charles and Cathy agree that the altercation occurred because Charles refused to allow her to live with her 29-year-old boyfriend. The stepfather, furious about the 29 year old’s involvement and resulting pregnancy tried to press charges with the police cause she is under age. The police would not take the case due to the Cathy’s age and consent. Cathy is currently 8 months pregnant, attends school, and has no reported cognitive delays.

Cathy stated that she is fearful of her step-father because she says he has a drinking problem and might be using cocaine. The stepfather denies any criminal history, substance abuse and domestic violence.

The family consists of a 38-year-old mother (Rose), a 15-year old girl (Ruth), and a 17-year old boy (Ron).

The Agency became involved with the family when it was reported that there is no gas on in the home and the electricity was connected illegally. The family has one electric heater, but the home is still cold. The 15 year old girl (Ruth) is seeing a 31 year old neighbor, and she is pregnant. The police are often asked to respond to the home, because the 17-year-old (Ron) breaks windows. It was also reported the mother drinks everyday while the children are home.

During the home visit, the utilities were on. However, the mother did indicate that she was behind in paying her utility bill. She is currently unemployed and receives food stamps. Her family has been assisting her in paying her rent. She plans on moving in with her mother next month.

Both her children have school truancy problems and the mother has tried to enroll them in an online program. No efforts have been made to determine how far along the youth is in her pregnancy.

Thank you for completing this survey
TAB 7 GOES HERE

Discipline Expert Survey #3
Welcome

Thank you for agreeing to assist the Ohio Department of Job and Family Services in identifying the best evidence-based practices that are needed in children’s services cases.

The survey requires you to read short summaries, or vignettes, of cases. These vignettes represent real cases in Ohio. As such, they vary in complexity and likely responsiveness of the family members to interventions. The arbitrary case numbers you’ll see may not be consecutive.

Associated with each vignette are anywhere from 1 to 18 concerns that were identified by the children’s services caseworker. For some of these, you may not believe yourself to have the disciplinary expertise or scope of practice needed to make a service recommendation. For others, you may believe that too little is known to make a service recommendation. But when you feel comfortable making a recommendation, you will be asked to indicate which of several evidence-based interventions you believe would be suitable for the case under consideration.

The following are instructions you are requested to follow

- Before beginning to evaluate the cases, you will be asked a few questions about your professional education, and experience.

- You will be asked to provide recommendations for services. These vignettes should be read as if the case is at the point where services are being planned. It will sometimes be challenging, based on the information provided, to know what to recommend.

- In making your recommendations, please assume that each case is being managed by a competent, well-supervised children’s services worker who meets professional standards in terms of his or her ability to engage and assess families, plan and coordinate services, evaluate progress, and deal with diversity issues. You should assume the caseworker is a service coordinator, though, and not a service provider.

- You will be asked to recommend specific interventions. These are interventions that ODJFS has identified as potentially relevant to some children's services cases. It would be highly unusual if you were familiar with all of these interventions, or perhaps even most of them. Please do not be concerned about interventions with which you are unfamiliar; simply focus on selecting interventions from among those with which you are familiar. Recommendations need not be based on actual accessibility or availability of the intervention in your local community, rather focus on selecting intervention that would be appropriate to the case.

We acknowledge that some of the judgments you are being asked to make are challenging. If you believe that a judgment is simply not possible given the available information, you may choose to leave that question blank.

The results of this study will be used to improve children's services in Ohio. ODJFS will see only aggregate responses across all of the experts being surveyed. Your responses will be kept strictly confidential.

Given that only professional judgments are being solicited, that the goal of the research is system improvement, and that your responses will not be attributable to you, this research has not been submitted to an Institutional Review Board for review.

This material has been prepared using public money and is subject to ownership by the State of Ohio. Any use or reproduction of the material needs to be approved by the State of Ohio.

We are grateful for your time completing this survey as it will help to improve services. Thank you.

Click "Next" to indicate that you are willing to proceed.
Following are a few questions about you and your qualifications.

The family composition consists of a 57 year old grandmother (Claire), a 26 year old mother (Hannah), of two children, a 7-year old girl (Abby) and a 5-year old girl (Zoey). The girls have different fathers. The mother is legally married to Oliver, the father of 5-year old Zoey, and divorced from Ryan, the father of 7-year-old Abby.

Agency involvement with the family began when it was reported that Hannah was not taking her medication for her Bi-Polar disorder, and she was drinking and driving while the two children were in the car. The reporter also stated that the mother keeps the children out until 2 o'clock in the morning, and associates with people who sell drugs. It was noted the mother smokes marijuana in front of the children and had drug paraphernalia in her car.

The mother was diagnosed with Bi-polar disorder when she was 15 and has been on medication. She indicated she has not been on medication since she left Oliver, the father of 5-year old Zoey. She states that Oliver had been verbally and emotionally abusive to her and she filed a Temporary Restraining Order against him.

She states that Ryan, the father of 7-year old Abby, was also abusive toward her. Hannah’s mother (Claire), with whom she and her children are currently living, states Hannah has stopped taking her medication and is much calmer.

Hannah indicates she drinks occasionally, but does not drink and drive. At the time, the family came to the attention of the agency, there were no DUI convictions. However, she is currently charged with driving under the influence and drug paraphernalia in the car. Hanna currently works and her mother, Claire, cares for the children when Hannah is working.

The father of the 5-year-old has not lived with Hannah for two years. He reported that when he was with his child’s mother, she was not addressing her mental health problems and she was seeing another man. He then terminated the relationship. His contact with his daughter is infrequent and that is because of Hannah’s fragile emotional state. Domestic violence charges were filed against him by his wife. He has charges against him for driving under the influence of alcohol, smoking marijuana, trafficking drugs and has his driver’s license suspended.

The father of the 7-year old does not know the needs of his child since he has infrequent contact with her. While he was living Hanna, domestic violence charges were filed against him. He is currently working in construction.

The 7-year old is communicative, looking forward to returning to school, and is extremely active. According to Claire and Hannah, she has a very short attention span. They have not had her evaluated. The 5 year old is shy but very energetic. The 5 year old is up-to-date on shots and has no known medical or mental health concerns.

**Concern: Domestic Violence (Adult)**

8. Which of the following statements would you most strongly agree with?

- I do not have expertise in regard to this concern. **SKIP TO NEXT CONCERN.**

- While I possess relevant expertise, I do not believe enough is known about this family at this time in order to recommend services. **SKIP TO NEXT CONCERN.**

- I am comfortable making service recommendations at this time, with the understanding that my recommendations are based only on those few salient features of the case as presented above. **SKIP TO NEXT CONCERN.**
9. Assuming the following interventions were available to the family, please check each of those that you believe could be of benefit to the family. You may check any number of interventions.

42. Are there any other comments you would like to make about this case?
The family composition consists of a 40 year old mother (Anna), and 39 year old father (James) and two children. The parents are divorced, and the father has visitation rights. The children are a 13-year old boy (Jace) and a 12-year old girl (Jackie).

The Agency became involved with the family when the father, who is caring for the children for one month during the summer break, determined the mother (Anna) was over medicating her two children. The father counted the pills and noticed the counts were significantly off. When he called Anna, she told him to ignore it and replace the missing pills from the pills in the other bottles. She claimed the pharmacist made a mistake in counting. James called the pharmacist who said their counts are correct. He also reported her home, where the children live, is dirty and infested with roaches. They live in a trailer, which has seven people in it.

The 13-year old has been diagnosed with ADHD and is taking Ritalin. The 14-year old also has been diagnosed with ADHD and is taking Ritalin, Concerta and Focalin. It was observed that the children have a close relationship with their mother and father. The mother is currently employed and has no known substance abuse problems.

The father of the children has a history of domestic violence against his children’s mother.

Concern: Domestic Violence (Adult)

57. Are there any other comments you would like to make about this case?
The family composition consists of a 36 year old mother (Charlotte), a 36 year old father (Charlie), a 5 year old girl (Chris) and a 3 year old boy (Nathan).

The family’s involvement with the Agency occurred when it was reported the 3- year old (Nathan) was found alone in the front porch, as the mother was asleep in the house. Mother stated her psychiatrist modified her anti-depressant medication and change caused her to fall asleep. The father was at work.

Both children are up-to-date with their shots. There are no concerns about family roles, interactions or relationships. The children are treated fairly and there are no known unrealistic expectations in the home.

Both parent work and both have strong family support systems. The mother has been diagnosed with depression and anxiety and is currently taking Cyclesa.

72. Are there any other comments you would like to make about this case?

The family composition consists of a 21 year old mother (Anna), a 1-year old girl (Samantha) and the mother’s 26-year old boyfriend (Dylan). The mother is divorced from her child’s father.

The Agency became involved with the family when it was reported a 1 year-old was brought to the emergency room with bruises on her face, bruises in/behind the her ears, pain in her right arm (appears to be a grab mark). The hospital is performing a CAT scan.

The mother and boyfriend’s explanation of the child’s injuries are inconsistent with the injuries found on the child. During the period in question the only persons who had access to the child was the child’s mother and boyfriend.

The child does not appear to have any cognitive/physical delays and has received her immunizations.

The mother has been with her boyfriend for about 8 months. The mother has heard the boyfriend yelling and fighting with her child. The mother is reported to be very emotional and talks about committing suicide. The mother denies any domestic violence; however others have heard verbal abuse between the mother and boyfriend in the past. The mother reports marijuana and recent heroin use. The mother does not believe her boyfriend abused her child. The boyfriend had a prior history of drug use (heroin). He is currently working and has a high school diploma.

Case 22

The family composition consists of a 31 year old mother (Addison), Addison’s 9 year old daughter (Chloe), Addison’s 8 year old son (Matt) and mom’s 28 year old ex-boyfriend, Lucas.

The Agency became involved with the family when it was reported that Addison’s daughter (Chloe) observed Addison’s ex-boyfriend (Lucas) hitting her mother. The mother stated Lucas did not hit her; however, he broke into her apartment and would not leave. She called the police and he was arrested for Domestic Violence.

The mother states she has no cognitive and physical health problems. Following her divorce nine months ago, the mother became depressed but she felt that was “situational.” At that time she obtained antidepressant medication from her physician. The mother admits to drinking alcohol daily but does not view this as a problem. No drug and alcohol related arrests were found. It was noted the mother posts sexually suggestive pictures of herself on Facebook and she feels that she dates “broken” guys and tries to “fix” them. This makes her feel better in “contributing to their lives.”

Both children were developing within the normal range and there were no concerns noted of any physical, cognitive, social or behavioral delays. Matt is not very verbal. Both children are reported to be “well-bonded” to their mother.

**Concern: Substance Abuse (Adult)**

122. Are there any other comments you would like to make about this case?
The family composition consists of a 39-year mother (Sophia), a 50-year old father (Scott), a 24-year old son (Ben), an 18-year old son (Brandon) and a 13-year old son (Brian).

The Agency became involved when it was reported the two adult children residing in the home were arrested for manufacturing methamphetamine in the home and they had physically abused their younger brother (Brian).

The police searched the house and did not find any equipment, but did find an abundance of chemicals for meth manufacturing. The mother denied having knowledge that her two sons were manufacturing meth. Her oldest son, Ben, remains in jail on the charge. Both parents stated, “That’s where he needs to be and we don’t want him back here.”

The mother has an “old back” injury caused from doing manual labor in a factory. She has been receiving pain medication for the past 15 years. She takes morphine every 12 hours and oxycodone 5 mg, three times a day. Her physician is trying to wean her off the medication. Emotionally, she struggles with depression, anxiety, and has panic attacks. She is receiving psychotropic medication. Having osteoporosis, she recently dislocated and broke her ankle and had surgery to implant a metal rod and screws. She states her physician does not recommend she work.

Scott has severe Rheumatoid Arthritis (RA) and has had several surgeries on his left arm, back, neck, and hip for multiple joint replacements, several of which have been unsuccessful. He has had RA since he was a child. He is unable to work and receives disability. He currently takes OxyContin, Percocet, and Tramadol. The rheumatologist is concerned about the high doses of medication but he sees no other option in trying to get Scott to function. He is facing additional surgeries for his knees.

When Sophia was pregnant with Brian, Scott was arrested for domestic violence. Sophia and Scott said that since then, there has been no domestic violence. However, domestic violence has occurred between Scott and their adult son Ben. The police have been called on several occasions to get Ben to leave the house.

Sophia, Scott, and Brandon completed mouth swab drug tests. Sophia and Brandon’s tests were negative, however Scott’s test was high for Oxycodone, Oxymorphone, and Tramadol. The caseworker spoke with Scott’s physician, who stated he is on substantial doses of medication, but there is no other choice considering the substantial damaged to Scott's skeletal system.

The youngest son (Brian) seems to be developmentally on target and has age appropriate chores. Sophia and Scott state they do not discipline him because he is very well-behaved and does what they ask him to do. Brian appears comfortable with Sophia and Scott.

When he spoke of his bothers getting arrested, he began crying. He did not want to discuss how his older brother abused him and left bruises on his arm. Sophia gave him a hug and he sat on her lap.

He is in the 7th grade and receives good grades (B’s and C’s). Brain’s school reports no problems with him and he has excellent attendance.

Supervision, food, clothing, shelter, and hygiene needs are adequately met.

[Blank Space for Writing]
The family composition consists of a 33-year old father (Anthony), a 26-year old mother (Amy), an 8-year old child (Sara) and a 7-year old child (Kelly).

The Agency became involved with the family after being contacted by the police. The parents have been married for approximately one year. The police were called to the house because Amy was being assaulted and Anthony was destroying the contents of the home while the two young children were present. There have been at least two previous domestic violence episodes which resulted in a restraining order being placed on Anthony. Nonetheless, Amy allows Anthony to stay in the home. Anthony is currently in jail. The police expressed concerns about the housing situation for the family, as it is dirty, has cockroaches, and is chaotic.

Amy is six months pregnant. She attends all prenatal appointments. She denies any substance use.

The mother reports she is able to care for her two children. The children share a queen sized bed in one bedroom. Amy has another queen sized mattress in another room and reported they did not use the other bedroom since it was very cold. She reported they usually all slept together or she sleeps on the couch.

The family does not have a stove. The mother cooks meals using a hot plate, microwave, or Foreman grill. At the time of the home visit there was food in the refrigerator and cupboards for the children. When the caseworker spoke to Amy, she denied any mental health issues, but seemed to have a depressed affect. She minimizes the domestic violence history, but states there were multiple incidents of domestic violence.

Sara is 8-years old, and has a disability which causes her difficulty in maintaining her balance. Sara’s teacher says she is very defiant at school and frequently acts out.

Kelly’s doctor has recommended she see a speech therapist and audiologist and get caught up on her shots. Kelly is currently on an IEP and does not have any behavioral problems at school. The school stated she is frequently sick and has a runny nose. School staff stated the mother does not follow through when they ask her to do something and does not take the initiative to do things without their suggestion.

**Concern: Emotional Behavioral (Child)**

152. Which of the following statements would you most strongly agree with?

207. How likely would there be a substantial benefit from services intended to address this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely

208. Are there any other comments you would like to make about this case?
The family consists of the mother, 35-year-old Madison, and her two children: Emma, age 16, and Jacob, age 12.

The agency became involved with the family when a hospital’s psychiatric social worker reported that Madison would be discharged the following day from a psychiatric unit. She is diagnosed with PTSD and Bipolar Disorder. Madison has a history of having auditory hallucinations, which tell her to kill her children and herself. Madison denies having these hallucinations now, and hospital staff have not observed any psychotic symptoms in the last few weeks. The psychiatric social worker states Madison’s medications are effective at controlling the hallucinations, anxiety, and depression.

The caseworker did not observe Madison to have any cognitive disabilities, and she understood concerns presented to her and she was able to relay information back to caseworker that was understandable and appropriate. Madison denied any significant physical health issues, although she is receiving outpatient mental health care. She is on a variety of psychotropic medications.

Madison reported she also has a home based mental health counselor visiting her twice a week and she has a case manager through the local mental health agency.

Madison denied any current domestic violence in the home, but has been a victim of domestic violence with her former partner, as well as the children’s father. Neither her former partner nor her former husband live in the home. Neither person is involved with Madison or the children.

Madison denies the use of non-prescribed drugs and alcohol, and the caseworker did not observe any signs of such in the home. When Madison is anxious, she has to tendency to “go off” on her children, expecting too much from them and is highly critical. She is aware of these reactions, and takes responsibility for them. She is working on becoming more self-aware of her anxiety in order to thwart her negative statements toward her children.

Emma is 16 years old, average height and weight for her age. She is able to protect herself based on her age and her ability to report abuse or neglect, and due to the fact that she would be able to safely flee from harmful situations should one present itself. At this time, there are no medical problems and she is not currently prescribed any medications. She is going to be a junior at her local high school. Emma stated she is on the track team and she loves school. She stated she was aware that her mother wanted to hurt herself, but stated since her mother received the right help she has no concerns. Emma was able to report to worker that if something did happen with her mother, Emma was able to call the appropriate individuals. Madison denied Emma has any behavioral or emotional issues. Emmawas very polite and respectful with the caseworker.

Jacob is 12 years old, 7th grader at his local junior high school, average height and weight for his age. Though Jacob is old enough to report abuse or neglect, he may not be able to recognize an abusive situation and safely remove himself. Caseworker observed Jacob to be very shy. He spoke with caseworker only briefly and would not leave his mother’s side. Madison did report Jacob is diagnosed with ADHD and is currently on medication for it. Madison stated Jacob does not have an IEP and does well in school. Madison denied Jacob has any significant behavioral or emotional issues. Jacob did not appear to be frightened of his mother. He was observed to be comfortable and happy in the home.

Caseworker observed that the family has positive interactions. All of the children had age appropriate expectations and chores. The family lives in a three bedroom home, which is clean and well maintained. All of the utilities are on and in good working order. Madison receives SSI and Child Support. In times of need, she stated she can obtain support through family and friends.

**Concern: Emotional Behavioral (Child)**
209. Which of the following statements would you most strongly agree with?

- I do not have expertise in regard to this concern. **SKIP TO NEXT CONCERN.**
- While I possess relevant expertise, I do not believe enough is known about this family at this time in order to recommend services. **SKIP TO NEXT CONCERN.**
- I am comfortable making service recommendations at this time, with the understanding that my recommendations are based only on those few salient features of the case as presented above. **SKIP TO NEXT CONCERN.**

[ ]
The agency became involved with this child one year ago when his mother died of a sudden heart attack. His father is in prison in a distant state serving two life sentences without parole for murder. He has never had contact with his father. With no immediate family able to care for David, the agency obtained custody and placed him in a foster home. He is intellectually bright-normal, but suffers depression from the loss of his mother and persistently worries of what will happen to him in the future.

He likes his foster home, but does not expect them to be involved with him after he reaches 18. In working with the foster parents, their long-term intent in remaining involved with David is not clear. He gets along well with others, but he is fearful of becoming attached because of the potential and unpredictable loss. He has limited contact, mostly by phone, with his maternal grandparents because they live 1200 miles away. Their health is very fragile and they are unable to provide sustained physical or emotional support to David.

Sports and video games are David's primary outlets. Not wanting to be adopted, David is scheduled to age-out of foster care in less than one year.

Thank you for completing this survey
TAB 8 GOES HERE

Discipline Expert Survey #4
Welcome

Thank you for agreeing to assist the Ohio Department of Job and Family Services in identifying the best evidence-based practices that are needed in children’s services cases.

The survey requires you to read short summaries, or vignettes, of cases. These vignettes represent real cases in Ohio. As such, they vary in complexity and likely responsiveness of the family members to interventions. The arbitrary case numbers you’ll see may not be consecutive.

Associated with each vignette are anywhere from 1 to 18 concerns that were identified by the children’s services caseworker. For some of these, you may not believe yourself to have the disciplinary expertise or scope of practice needed to make a service recommendation. For others, you may believe that too little is known to make a service recommendation. But when you feel comfortable making a recommendation, you will be asked to indicate which of several evidence-based interventions you believe would be suitable for the case under consideration.

The following are instructions you are requested to follow

- Before beginning to evaluate the cases, you will be asked a few questions about your professional education, and experience.
- You will be asked to provide recommendations for services. These vignettes should be read as if the case is at the point where services are being planned. It will sometimes be challenging, based on the information provided, to know what to recommend.
- In making your recommendations, please assume that each case is being managed by a competent, well-supervised children’s services worker who meets professional standards in terms of his or her ability to engage and assess families, plan and coordinate services, evaluate progress, and deal with diversity issues. You should assume the caseworker is a service coordinator, though, and not a service provider.
- You will be asked to recommend specific interventions. These are interventions that ODJFS has identified as potentially relevant to some children's services cases. It would be highly unusual if you were familiar with all of these interventions, or perhaps even most of them. Please do not be concerned about interventions with which you are unfamiliar; simply focus on selecting interventions from among those with which you are familiar. Recommendations need not be based on actual accessibility or availability of the intervention in your local community, rather focus on selecting intervention that would be appropriate to the case.

We acknowledge that some of the judgments you are being asked to make are challenging. If you believe that a judgment is simply not possible given the available information, you may choose to leave that question blank.

The results of this study will be used to improve children's services in Ohio. ODJFS will see only aggregate responses across all of the experts being surveyed. Your responses will be kept strictly confidential.

Given that only professional judgments are being solicited, that the goal of the research is system improvement, and that your responses will not be attributable to you, this research has not been submitted to an Institutional Review Board for review.

This material has been prepared using public money and is subject to ownership by the State of Ohio. Any use or reproduction of the material needs to be approved by the State of Ohio.

We are grateful for your time completing this survey as it will help to improve services. Thank you.

Click “Next” to indicate that you are willing to proceed.
## Your Qualifications

1. **Name** (your contributions will be noted in the acknowledgments section of the final report if you provide your name here, but nobody except the research team will be able to associate your responses to your email address)

   ![Name Field]

2. **Professional License or Credential**

   ![License Field]

3. **Primary Current Employment**

   - **Employer**
   - **Years at Employer**
   - **Current Title**

4. **Other Current Employment (if any).**

   - **Employer**
   - **Years at Employer**
   - **Current Title**

5. **Primary Areas of Professional Expertise** (Check All That Apply)

   - [ ] Early Childhood (ages 0-6)
   - [ ] School Ages (7-13)
   - [ ] Adolescent and Young Adult (age 14-24)
   - [ ] Adult

6. **Substance Use Disorder**

   - [ ] Child and Adolescent
   - [ ] Adult
7. Other Areas of Expertise

☐ Developmental Disabilities, including Autism Spectrum Disorder

☐ Teen Pregnancy and Parenting

☐ Domestic Violence

☐ Parenting and Family Systems

☐ Deaf/Hard of Hearing, Speech/Language, and/or Visual Impairment

☐ Medical/Physical Health
The agency became involved with the family when Kaylee’s teacher stated that Kaylee reported their father and his girlfriend spent the weekend “doing all sorts of pills”. The teacher states the family had been living in another city with the children’s grandfather. The grandfather grew tired of the father’s drug abuse and told them to leave. The father and children are now living with the father’s ex-wife (children’s mother). The teacher knows the mother and is certain she is not using drugs.

Joe appeared to be of the average intelligence. He works full-time as an electrician. Because of a chronic vertebra problem and two shoulder surgeries, he uses Vicodin and Percocet. He states he takes about five pills per day and does not get euphoric from them, but needs them for his daily life. He also complains of problems with his colon, kidneys, and cirrhosis of the liver. He stated he has never done pain management but wants help. He reported no mental health problems. He reported that besides the pills he does not use other substances, although he reported using heroin ten years ago. He stated he did believe he had a problem with alcohol eight years ago, but doesn’t drink regularly. He stated he went to a bar a month ago. He reported to have contact with his children and that their relationships are getting closer. He reported that spending more time with them is helping him through these hard times. He reported that he is no longer involved with Alexis and plans on dating a girl without a substance abuse problem because it will help make things easier.

Anna presented as an adult of average intelligence, without medical or mental health issues. She stated she has no history of domestic violence or drug use. She works full-time as an insurance agent. She stated she has an occasional drink every few weeks. She was calm and cooperative throughout the investigation. She was observed to interact with the children positively and spoke of age appropriate expectations of them.

Kaylee is 17 a year old female who is able to recognize abuse and neglect and is likely able to remove herself from harm as needed due to her age. She currently attends a vocational school, wants to be a cosmetologist, and is usually on the honor roll. She stated she went to a therapist when she was younger because she had ADHD. She took Ritalin, but stopped because she doesn’t like taking pills, and doesn’t feel like she needs to be on medication.

Evan is 13 years old in the 7th grade, average height and weight, without developmental delays. He stated he is getting good grades and loves playing video games. Chris stated he was diagnosed asthma when he was 8 years old, but hasn’t had any asthmatic attacks since he was 9. He is on no medication.

**Concern: Substance Abuse (Adult)**

8. Which of the following statements would you most strongly agree with?

- [ ] I do not have expertise in regard to this concern. **SKIP TO NEXT CONCERN.**
- [ ] While I possess relevant expertise, I do not believe enough is known about this family at this time in order to recommend services. **SKIP TO NEXT CONCERN.**
- [ ] I am comfortable making service recommendations at this time, with the understanding that my recommendations are based only on those few salient features of the case as presented above. **SKIP TO NEXT CONCERN.**
9. Assuming the following interventions were available to the family, please check each of those that you believe could be of benefit to the family. You may check any number of interventions.

- Positive Family Support
- Safe Environment for Every Kid (SEEK)
- Twelve Step Facilitation Therapy

10. In the space below, please write in the names of any evidence-based interventions that might benefit this family in regard to this concern but that were not included in the above list.

11. How likely would there be a substantial benefit from services intended to address this concern?

- Very likely
- Somewhat likely
- Somewhat unlikely
- Very unlikely

12. Are there any other comments you would like to make about this case?
Case 26

The family composition consists of a 42 year old mother (Aubrey), an 11 year old boy (Josh) and a 10 year old girl (Evelyn). The father of the 11 year old is James; however, the father of the 10 year old is unknown.

The family’s involvement with the Agency occurred when it was reported the mother comes home every day and “whoops” her children with a switch and a belt on their legs and back. She also burns their fingers. The 11 year old is reported to have scars on the back of his legs and circular injuries on his arm from the beatings. The mother does not allow the children to eat anything in the house while she is away.

The mother indicated the family has been under stress this past year due to finances and behavioral issues of her son. Since the mother has been employed her finances have become less of an issue. Prior to her current employment they had been homeless.

The mother expects her children to do chores and denies addressing her children in negative tones or demeans them. She uses physical discipline (whipping children on the butts with belts) but she also has them write lines and study a Bible character and write an essay as one form of discipline. She had a surveillance camera installed in her home to ensure their safety. The camera streams directly to her phone.

The father of the 11 year old, the mother reported, has not been a source of support but he has made attempts to see his son. Aubrey does not want him around because he filed a domestic violence report against her for throwing bottles and pieces of a broken mirror at him.

The 11 year old is going into the 7th grade and has a history of being suspended from school due to cursing, being loud and disruptive in class and not doing his work. He takes medication for his ADHD. The mother reported that when he takes his medication his behavior improves. However, over the past year the mother indicated his behavior has gotten worse and he has destroyed property in the house, fights with his sister, and has stolen money from her.

The 10 year old is able to self-protect. She is going into the 5th grade and does not have any cognitive, physical, or developmental delays. She indicated that she has been punished by her mother (whooped with a belt and switch). She stated her fingers were burned when she and her brother had been cooking when her mother was at work. She is expected to clean her room and the kitchen. She tends to fight with her brother a lot and has recently started to run away from home.

Concern: Domestic Violence (Adult)

- Somewhat unlikely
- Very unlikely

37. Are there any other comments you would like to make about this case?
The family composition consists of a 25 year old mother (Eli), a 4 year old boy (Owen) and a 1 year old girl (Mia). The father of the children (Max) does not live with the mother or his children.

The family’s involvement with the Agency occurred when it was reported the children were home alone. The police responded to the report. After entering the home and waiting 30 minutes they placed the children in the cruiser and took them to the Agency. In the process of placing the children in the cruiser the mother walked in and stated she was at the store, but could not say which store. She did not have any bags with her. When the police entered the home, they reported there was no food in the home, no diapers, very little clothing, and no toys. The children were watching TV at the time they entered the home. The mother was arrested on two counts of child endangering and is currently in jail. The mother indicated she was homeless and was “staying over” in her children’s father’s apartment.

When speaking to the mother she indicated the morning she left her children alone she had chained the front door and went out the back door. She went to do laundry and then went to the Dollar Store. When she discovered she did not have her debit card she returned to the house. She did not want to wake her children and thought they would be alright when she went to do laundry and go to the store. The children’s father was not aware of the mother ever leaving the children alone.

The Agency placed the children with their father. Prior to placement he spent considerable time with the children, including taking them to the park and going to Magic Mountain. He is employed and has the support of friends and family to assist with supervising the children. The father has gotten a bed for the children and can obtain clothing for the children.

The 1 year old is pre-verbal; however she recognizes simple instructions given to her. She can assist in putting her clothes on and identify objects. The 4 year old has limited verbal skills. Both children appear to be on target for their age.

52. Are there any other comments you would like to make about this case?
The agency became involved with this family when it was reported the child to be frequently playing the roof of the house. Upon investigation, it was learned that the child also had a bruise, approximately 2 inches in diameter, on his thigh. When the child was asked what happened, the child quickly said that his mother hit him with a belt. The child has been diagnosed as having ADHD and prescribed Ritalin, however the mother does not give it to him regularly. She does not like giving her son medication.

The mother, six months pregnant, states she is physically exhausted, low on energy and is depressed, and finds it difficult to parent a very active child. The father works extremely long hours at a bank, and is out of town 2 to 3 days a week, and is not often home.

Case 30

The family composition consists of a 33-year old mother (Leah), the mother's 34-year old boyfriend (Les) and a 12-year old girl (Sophie).

The agency became involved with this family when it was reported the mother of 12 year old Sophie and her boyfriend subjected Sophie to extreme sexual abuse over a six month time period. Following a lengthy trial and sentencing of the boyfriend and mother to prison, the mother and boyfriend are not permitted to have any contact with Sophie.

The impact of the abuse on Sophie now exhibits itself with visual and auditory hallucinations, obsessions with popular cartoon characters who serve to “keep me safe”, and she does not wish to bathe. The Agency placed the youth with her father (Tim) and his wife (Emily), who are emotionally and physically supportive of her. The father is employed; however, his wife (Emily) was in an automobile accident and is recovering from shoulder surgery. The father struggles to comprehend what his daughter endured from her mother and boyfriend and becomes angry, depressed, and worried about his daughter’s future.

96. Are there any other comments you would like to make about this case?
The family composition consists of a 32-year old mother (Caroline), a 12-year old girl (Natalie), a 10-year old girl (Rosalie) and a 9-year old girl (Lydia).

This family came to the attention of the Agency when it was reported the 12-year old was “staying up all night to babysit her 7-year old cousin “while the cousin’s mother was away”. The cousin’s mother gets home from work at 2 am, and Natalie’s mother picks her up when it is time for her to get ready and go to school. Natalie’s mother was unaware that Natalie was ingup all night long.

Natalie has significant behavior problems at school. Natalie has ADHD and is oppositional defiant. She takes Concerta and Ritalin. She has no physical health concerns. Although she is very bright, she does poorly because she does not complete her work. Natalie states she is too tired from staying up all night and can’t do her homework. She has had multiple suspensions for being disrespectful towards staff (threatened to shoot a teacher if she had a gun, told the principal she was going to hit him) and destructive (writing on desk with markers, threw the teacher’s book in the garbage). She is out of control when she is not on her medication.

Natalie is excited about caring for her cousin and has done well with this task. Rather than caring for her cousin in her cousin’s house, she will do it in her home while her mother is present. Natalie’s mother reports that Natalie’s disruptive behaviors decrease as the level of her involvement in other’s lives decreases. With her mother’s support, Natalie will babysit her cousin at her mother’s house only when her mother is there.

The 10-year old (Rosalie) has excellent cognitive and social skills. She has a number of outside friends and loves outdoor activities.

The 9-year old (Lydia) is most interested in outdoor events. She is not interested in television and prefers the company of friends and family. Lydia exhibits strong intellectual skills and interacts well with outsiders as well as with her siblings. She has no assessed or suspected emotional or behavioral impairments.

The girls’ mother is able to discuss her children’s different personalities, and tailor her responses to her children’s actions in a child-specific manner. The mother evidences strong cognitive skills and communicates her thoughts to others with reflection. She arranges for sufficient income-flow into her family in order to meet her children’s needs and becomes directly involved in extra-familial contacts in order to address any safety concerns of potential friends of her daughters.

Caroline exhibits appropriate emotional control in order to engage in beneficial communication with her daughters. Caroline has no physical health concerns. She evidences no emotional/behavioral deficits and is actually quite able to engage others in attempts to strengthen their own protective skills. Caroline has no documented or otherwise suspected domestic violence history. There is no evidence or otherwise received reports of illicit substances for this family. Caroline’s discussion of stress reduction methods and parenting practices was presented in a winsome and persuasive manner.

**Concern: Emotional Behavioral (Child)**

- Very unlikely

121. Are there any other comments you would like to make about this case?
The agency has Ella in custody and she is placed in a foster home. At visits with her father, it was reported that he punches her in the legs and ribs, and speaks to her very insultingly. When custody is terminated, Ella is afraid of going home with her father and is threatening to run away.

Ella’s mother has a severe physical illness with depression and Ella wanted to check on her during the visit. Her father would not let her and took her phone away.

Ella has been diagnosed with ADHD and has a learning disability, and a hearing impairment. Last year, she was sexual abused by another 13 year old with whom she went to school.

Ella’s mother is unable to work and receives SSI, food stamps and medical coverage. Because of Ella’s father having an extensive history with domestic violence and substance abuse, she does not want Ella around him.

**Concern: Emotional Illness (Adult)**

Case 33

The family composition consists of Natalie, a 32 year old mother, Christian, age 32, the father of her two children, Natalie's 7 year old son (Ben) and her 4 year old son (Jack).

The family's current involvement with the Agency occurred when it was reported the 7 year old was "filthy", had holes in his clothes and scabs all over his body from bed bugs. Additionally, there were concerns that both parents used drugs and the mother was found "passed" out with a needle in her arm and a line of cocaine beside her.

The family is currently living with relatives because their home is infested with bed bugs. The mother took her son to the doctor when several bites were seen. The family has tried to get rid of the bed bugs by bombing and has thrown away their furniture.

The mother denies currently using drugs; however it was revealed that when she was in pain recently she took her husband's pain medication. She also stated she uses marijuana periodically (last month) but not around her children. Cocaine and marijuana were identified as her substance of use. The mother had previously been in rehab and reported she has been "clean" ever since. The children’s father has a history of substance abuse and a criminal record involving possession of drugs which was identified through a criminal record check. The Agency has not been able to locate the father to conduct an interview with him.

The 7 year old currently attends school. His teacher reports he has a lot of separation anxiety, and is behind academically. The 4 year old is very verbal and does not appear to have any cognitive or physical delays.

200. Are there any other comments you would like to make about this case?
This family came to the attention of the agency by a family friend who read the mother’s Facebook page which stated she smokes marijuana and takes Percocet. The family friend is worried that the children are not being fed and looked after.

When the caseworker interviewed Ella, she denied drug use and has reported that she would be willing to do a drug screen. The family lives with Ella’s mother, Isabella. With Isabella playing a major role in raising her grandchildren, the children appear to be well taken care of and adjusted. Lillian and Claire are friendly and talkative, although Lillian is quiet and shy when she was first approached. The children are clean, and ample food is in the house, and an abundance of toys and age appropriate books.

Lillian and Claire have access daily to mandated reporters through school and their pediatrician. Those individuals see no concerns with the children’s health and well-being. The children have had all of their immunizations.

Mother reports that she was in abusive relationship with the children’s father, Dan. She said that Dan was charged with domestic violence and she has a PSO against him. He has not been around since she obtained the court order.

The family consists of Clara (51 years old), who is the non-custodial mother to 17-year-old Mason; Clara’s brother and Mason’s uncle is 54 year old Steve. At the time of the call, Steve had temporary custody (private) of Mason.

The agency became involved with this family when 17-year-old Mason called the agency for help. Because his mother was unable to raise him, his uncle obtained legal custody of him 8 months ago without Agency involvement. Mason states his uncle kicked him out of the house, and he has no place to go. Mason is in the 9th grade and has an IEP.

Mason’s mother would like to care for him but her own physical health problems, stemming from the lasting effects of an automobile accident, prevent her from being able to provide Mason with the skilled guidance he needs. Clara states Mason becomes easily frustrated when his needs and wishes are not immediately satisfied. He subsequently becomes anxious, reasoning skills become restricted, and then he becomes very impulsive. On these occasions, he has smashed windows, thrown rocks at parked automobiles. He has no history of becoming physically violent toward others. On several occasions, the police have been called to deescalate the situation. Because of his demands on others and lack of insight and emotional control, he becomes socially isolated and depressed.

Steve states that he does not have the patience or skill set to deal the Mason’s erratic behavior. He states when Mason “blows”, he has been called away from work to deal with Mason. His employer is not sympathetic to Steve having to leave work spontaneously. Since no family members were able to assist Mason, the agency obtained custody of him and placed him in a special needs foster home. It is expected the custody will continue until he is 18 years old.
