Job Descriptions

Plumber - A plumber is a skilled craftsperson who installs and repairs pipe systems that carry water, waste drainage, natural and medical gas in buildings. They join pipes and install fixtures like bathtubs, toilets, dishwashers, and water heaters. Often they design these systems or they may work from blueprints and drawings. They have the very important job of helping to keep water safe for you to use for drinking and bathing.

Pipe Fitter - A pipe fitter is a master craftsman who installs many varieties of piping systems. They layout, fabricate, and assemble pipes from drawings, blueprints, and specifications. They thoroughly test the piping systems for proper operation. Pipe fitters install and service sophisticated equipment, state-of-the-art controls and piping systems for power generation, pharmaceutical manufacturing, food processing and refrigeration, petroleum refinery, and chemical and petrochemical processing. They complete environmental control systems in schools, hospitals, hotels, motels, airports, malls, high-rise offices, and apartment buildings.

Mechanical Equipment Service - The mechanical equipment servicer installs, services, and repairs industrial and commercial refrigeration and air conditioning equipment according to blueprints and engineering specifications. They connect motors, compressors, temperature controls, humidity controls, and circulating-ventilating fans to control panels. The servicer is responsible for maintaining numerous pieces of equipment, diagnosing problems, and taking correction action when necessary.
