Multiple systems being consolidated into one new LMS for trainees

What is CAPS LMS?

We are excited to share that a new Office of Families and Children (OFC) learning management system is currently being designed to bring big improvements for employees and caregivers.

An industry-leading learning management system will be implemented later this year to help connect the OFC and its trainees. **The Child and Adult Protective Services Learning Management System** (CAPS LMS) will serve certain county and state employees as well as external populations including foster, adoptive, and kinship caregivers. Today, these groups use multiple, outdated systems to track individual training, certifications, and licensing requirements.

The Office of Families and Children is working closely with Ohio's University Consortium for Child and Adult Services, Regional Training Centers, the University Partnership Program, and Job and Family Services Agencies/Public Children Services Agencies to ensure a seamless transition.

What's New June 2022: A Projected Launch Date!

The CAPS LMS team reached a major milestone this month! We have identified a tentative launch date for the new LMS: **November 30, 2022**. Based on the scope of this project, we recognize this date could change but we are encouraged by our progress. Stay tuned for updates.

Recently, the project team outlined concepts for how the new system will operate and what data needs to be included for a successful transition. Ongoing work to move data currently housed within each legacy system continues. Once that is complete, testing will begin.

Have a Question?

If you have any questions regarding this transition, please contact capslms@ifs.ohio.gov. Additional information and training opportunities will be announced as the project progresses.
